### Fought the Americans at

### **MIDWAY**

In every great battle there is a loser as well as a

winner. This is the story of a great conflict at sea, a

it appeared to the eyes of a Japanese participant!

### by Lt. Commander Sesu Mitoya

formerly of the Imperial Japanese Navy

WHEN first I heard of the planned attack on Midway, I was delighted. Like most Japanese naval officers in early 1942, I was sure of Japan's coming victory over the United States. This operation promised good opportunities to win glory for Dai Nippon, and

perhaps a promotion.

I know now.

I was Communications Officer on the proud Aircraft Carrier Kaga. Then a Lieutenant Commander, I served under the command of Captain, Jisaku Okada. One of my best friends, Lieutenant Commander Tadashi Musumi, was commander of all the gun crews on board our big CV (aircraft carrier). It was one of the finest ships in the fleet—a happy ship with a fine, tightly knit complement of crewmen and airmen.

Early in April, planning for the invasion of Midway began. This was to be Japan's longest strike eastward, far across the Pacific, almost to the Hawaiian Islands. Its purpose was to seize a distant outpost, beyond which the American fleet could be held. This would cut off American communications with Australia. More important, it aimed to draw out the American fleet, and force it to give battle. We were sure that we could win that battle. How mistaken we were,

Our operation plan was gigantic. My group, the First Carrier Striking Force, led by Vice Admiral Chuichi Nagumo, was to strike from the northwest, at Midway. Not far south of us, striking straight out of the west, was the main Battleship Force, led by the revered Admiral Isoroku Yamamoto himself. Further south, and coming in from the southwest, was the Transport-Invasion group, led by Vice Admiral Nobutake Kondo, with a Close Support Group led by Vice Admiral Kurita.

Two diversionary groups led by Vice Admiral Hosogaya were to invade the Aleutian Islands, far to the north, at the same time. They were to seize Adak, Kiska, and Attu Islands there. At least they were

successful-for a while. N-Day was set for June 7th.

After the war ended, we learned that the Americans knew all about our plans. By an incredible feat of military intelligence, they had broken our code. Every message radioed from Tokyo or from our ships were perfectly understood by the Americans. They were waiting for us—had we only known it. American naval, air and ground forces were concentrating at Midway. (Continued on page 58)

### I Wonder if They

Remember My Name?

fiv Clement Holl

A lot can happen in twenty-four hours.

In that incredibly short space

of time, I put in a life-

time of bloody combat service!

THE LONG sear across my stomach is real enough. It hurts when I forget and stretch upward, reaching for something. But the short day of battle that put the sear on me, that still seems unreal—something out of a bad dream.

One day of combat was all—for me. It was enough. I wonder if the men left in my company even remember my name!

I women it the fact that my company the member my name!

I was an infantry replacement—one "body"—being shipped north, when the Korean "Police Action" seemed almost ended, in November of 1950.

It's ironic, to think of it now. Most of the men in

the truckload of replacements were antious to get up front. The war was nearly over—we thought We wanted to be assigned to an outfit, so that we would be "combat veterans," when it all ended in a few days. The line divisions were simply chasing the North Koreans north, to the Yalu. It was a cinch —according to what we had heard.

If we had known that six Chinese Armies were waiting for us, hidden in the bleak hills, we would have felt very different. But we didn't know that, then.

It was Thanksgiving Day, November 25th, when we reached a village called Kujang Dong, way up on the Chongchon River, in North Korea. 2nd Infantry Division had paused for Thanksgiving dinner turkey and all the trimmings. We were a pretty gay bunch. It would be nice to wear the proud Indian

The hills of North Karea were cold and angry. Behind them lay the treacherous hordes of Red Chinese.

It was cold on that Thanksgiving Day. We took it easy for a while. According to rumor, the war was almost over. The rest of this "Police Action" would be a romp . . . or so we thought.

Head shoulder patch. When you have been a homeless replacement for weeks, that sort of thing seems very important.

A fellow named Hank, and I, were assigned to B Company, 9th Infantry Regiment, at Kujang Dong. Hank was killed the next day. I never did know what his second name was.

Captain William Wallace, the C.O. of Baker Company, talked to me for a few minutes; and then sent me to the Second Platoon. My platoon leader's name was Lt. Wethered. He was pleasant and cheerful, and assigned me to a rifle squad right away.

The squad was pretty friendly. The men seemed is understand how nervous I was, and most of them tried to make me feel better. The squad leader, Sergeant Joe Gross, took me around and had me talk to all the men, so that we'd know each other. Some of the men only glaneed at me, nodded or said "H." and let it go at that.

If was a real mixed kind of company—about seventy percent white, twenty percent colored, and ten percent native ROK's (South Koreans). The ROK's couldn't speak any English. They just grinned and nodded at us. They stayed pretty much to themselves, though. There were about 130 men in the company. It was a queer feeling to become one of this assorted lot of men. But I was glad anyway to have an outflit of my own.

The Korean "police action" seemed to be nearly finished; that transgriving Day. We were close to the Yalu and the Manchurian border. The North Koreans were licked and running. It seemed that it would be all over in a few days. 9th Regiment was simply chasing the last of the North Koreans, in a steady, day-by-day pursuit.

Talking and joking with the old-timers, and eating turkey, my nervousness at joining a new outfit disappeared fast. It was pretty much like being on

The hills get higher and more barren as you get a little further north. The Air Force covered us but they somehow failed to warn us of the coming Reds.

The Chinese attacked in screaming waves. It was the first time that anyone was even aware that they were in the field against us. We hit the ground and fired but we were vastly outnumbered.

a field problem bivouac back in the States. After weeks of being a homeless replacement, it felt good to "belong."

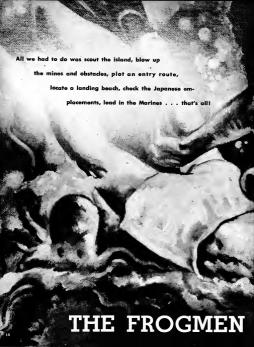

It was cold—about 15 degrees—but not too bad. The country was ugly, all bare, brown ridges and hills. But we didn't figure to stay long in this neighborhood. We were right about that, but not for the reasons we thought then.

Everybody was so sure that it was nearly over that they were careless. Most of the men had thrown away their steel helmets. The helmets wouldn't stay on the thick pile caps we wore. Only three or four had kept their bayonets. Nobody carried much ammo. It was too heavy, lugging it around. About half the men carried only one hand genade. Most carried none at all. All my new issue equipment looked rather silly, and got me a lot of kidding. Bob Forhan, in my squad, told me to get rid of a lot of it: "You won't need all that junk," he said, "and you'll get sick of hauling it around." But the idea of just throwing away government issue stuff still seemed pretty reckless to me. Back in the States you'd get court-martialed for throwing anything away.

Forhan laughed at me for hesitating. "Smarten up, Bub. This is a combat zone. No accountability for lost stuff. You can draw new gear when we go

back south.'

Bedding down for the night, I felt good. There seemed to be no danger, and the friendliness of the other men was very comforting. We slept like logs, in warm bedrolls, in spite of the hard frozen ground. It means something to be in a real outfit, not just a homeless replacement. (Continued on page 52)

### by David Gould, former CPO, USN

E ROLLED to the edge of the rubber boat The muffled roar of the P.T. boat's engine blended with the rushing sound of wind.

"Gould next' Get set!"

with the Pushing source of wind.

"Gould next! Get set! ..."

"Ready, now! Go!"

Water crashed against his shoulder as he dropped over the side. The dull throbbing of the engine discovered the side. The dull throbbing of the engine discovered the side. eared quickly. The water was warm and pleas-Low above the gently rolling waves the dim tiline of the island loomed blackly out of the confit night. He started towards it, swimming why and easily.

slowly and easily.

So this was Eniwetok! The heavy "45" strapped
to his hip, and the graph-paper mapping board tied
to his left thigh, bothered him a little. He keyt
thinking of the cyanide capsule in his belt. "If
about to be captured, break the capsule in your
teeth. Death will be quick and painless"—that's what his training manuals had said.

It just didn't seem real. Here he was swimming towards an island occupied by Japanese who would kill him joyfully, if they could Somewhere off to both sides of him in the dark ocean other men like him were swimming too-other frogmen -heading for the ominous island.

A sardonic smile creased his lean face for a moment. He was thinking back as he swam steadily shoreward. The daring volunteers who were "frog-men?" Volunteer, like hell! He had become a frogman in the old, old way of armies and navies; "We need volunteers. You, you, and you!" That was how he had volunteered—by request.

was now he mad to mantereum—by required. Long ago, quite unconscious of what it might portend, he had filled out a long classification card. When he joined the Navy. Dave Gould had requested Seabee duty. Logically, too. He was a metal worker, skilled in heavy metal construction metal worker, skilled in heavy metal construction. and fabrication. So he had been made a Shipfitter First Class! That was typical of the military sys-

tem, he thought. tem, he thought.

It was to be a controlled to the design of the design

### Tail Gunner

by Jack Pierson

The Germans forgot about the rest of us.

They were going to battle it out with a

tail gunner who had just knocked out two

of their buddies. It was personal, now!

I stared out the open waist window of our B-17 and watched the debris swirl by, I could swear I saw a man, or rather, parts of a man, sweep past the tail of the Fortress. The moisture smashed into my face and I wondered what had caused it. As I turned around, I saw the look on the face of the other waist gunner, Sgt. Gary Weins, and it was then that I knew what had hit my face. I tore off the fleece-lined gloves and wiped my hand across my eyes. Blood. But it wasn't mine. It was the blood of that Luftwaffe pilot we had just knocked out of the skies. A bloody end to a bloody career.

We were a jubilant crew as we watched the P-51s herd us back across the English Channel to our base at Bury St. Edmunds. And why shouldn't we be? We had clobbered the target, our tail gunner S/Sgt. Bob Perlow had knocked down his fourth enenemy aircraft, and we were one mission closer to going home. Ten to go.

Interrogation was like it had always been. Everyone talking at once, all trying to confirm Bob's kill. Finally the intelligence Major quieted us down and got the story pieced together.

"Fourth one, eh Sarge? Getting to be a real hot shot, aren't you?"

We all looked up when Bob didn't answer, but turned away from the table and went out of the Nisson hunt that was used by Intelligence.

Our pilot, Al Lawrence, turned to me in surprise. "Hey, what's eating him? Didn't

he make out with that WAC last night?"

But I was as surprised as any of them. You get to know a guy pretty well after spending two years with him. Bob and I had been together ever since we had hooked up in gunnery school at Kingman, Arizona. It's funny, some guys you like right away. Get to be buddy-buddy with. That's the way it was with Bob Perlow and me. We had finished our training, then we were both sent to Lincoln, (Continued on page 19)

As they possed along our flonk, the woist gunner let loose with a long, steady blast. "OK tail . . . they're coming your way!"

we weren't the only ones. We gave back the Jerries as good as we got. The intercom rong with voices, shouting, "Scratch one more FW."

Nebraska, for crew assignment. As luck would have it, we both dreve the same crew. Bob as tall gunner, and me in the waist. After training at Stoux City, lowa, we were shipped overseas to England and the lower of the state of the state of the state of the like fifteen years and fifteen missions ago. You get to know a gup pretty well in that length of time. It took me a half-hour to find him. He was sitting watching the ground crew outline our B-37 back

into shape for tomorrow's mission.

I didn't say anything, just took another can and sat down beside Bob. I shivered as an electric drill shricked its way through the aluminum. They were cutting out a chunk of fuselage that had been punctured by a sliver of flak.

"Know how many holes we took today?" He pointed at the patched-up Fortress, and didn't even wait for an answer. "I know, I counted them. Every single one. 289 of them."

I could feel him shudder through the thin sleeve of his flying jacket. The one with the fifteen bombs and three swastikas painted on the back. I blurted out. You don't beat around the bush

with your buddy.
"Whatsa matter, Bob? What's eating you?"
He stood up then, and walked slowly to the squatting bomber. He ran his finger around the frayed

I waited for him to continue.
"I can't fly another mission! I just can't. I don't
know how I've gone this far. Every time I think of

it I'm ready to puke my guts. And I don't care what they do to me—let them put me on permanent KP—

I don't give a damn anymore?"

I had seen guys like this before. The Air Force has a special name for them... I aked up. I guess in the Army you'd call it combat faitgue. A flyer puts in so and then he's had it! The tensions have built up to the boiling point and he's ready to explode. He's sweated out too much flak, battled it out with too many enemy flatters, seen too many B-178 go up in four orange blobs as the gas tanks explode, prayed with engines shot out. That's what they mean you with engines shot out. That's what they mean you with engines shot out. That's what they mean you

flaked up. And Bob Perlow was flaked up

And Bob Periow was flaked up.
I talked it over with the Flight Surgeon, but he
just laughed at me. Said that at the last flight
hysical Bob had passed without any trouble. What
had happened today was just the nervous reaction
from knocking down that Pcoke-Wolfe. But he'd
keep an eye on Bob—and don't worry about it,
Serresant

Al Lawrence put it this way. Said everybody got scared sometime. Be a liar if he didn't admit it. Even he got scared. But he didn't have time to talk about it now ... a hot date with a nurse ... y'understand.

Maybe I did and maybe I didn't. All I could do was watch Bob's pasty face as we sweated out the take-off back in the waist. Then we were airborne, and jockeying for posi-

In the formation.

I slapped him on the rump and watched him shuck his way toward the rear. The pilot's voice came through my head-sets. (Continued on page 50)

### THE DIEPPE RAID:

### an epic of Canadian Courage

by Furman Keith III

CANADIANS DO NOT go in much for boasting.
Probably that is why today, the great Dieppe
Raid is nearly forgotten, while many lesser amphibious battles are well remembered.
But the Dieppe landing of World War II was the
model for all the seaborne invasions, since. And the

model for all the seaborne invasions, since. And the quite Canadians, gentle and modest in time of peace, showed again how terrific they can be in time of war. They formed the core of the assault force, in which also were Britons, Soits, Americans, Prenchmen, and indeed representatives of all the Allied World.

The typical Canadian attitude towards boasting, was summed up by one sergeant's remark to a recruit, who sounded off about how tough he'd be. Said the sergeant: "Not so much bloody mouth! Let's see what you do, not hear about it!" Backbone of the almost recklessly daring raid, was the Canadian 2d Division, spearheaded by the

Royal Regiment of Canada, plus the Royal Hamilton Light Infantry, the Canadian Essex Scottish, the South Saskatchewan Regiment, the Cameron Highlanders of Canada, the Fusiliers Mont Royal, and the 14th Canadian Army Tank Battalion with the Calgary Regiment.

An inter-Allied Commando unit was formed to aid the predominantly Canadian task force. It in-

cluded British and Free French Commandos and American Rangers. British, American, and Allied air units, and British naval units aided by a few American ships would support the assault. They, too, would execute and cover the withdrawal after the raiding attack was over.

The great attack had two prime purposes. One was to test the German defenses of Festing (Fortress) Europa, to take prisoners, and bring back military papers and information. More important, it would put to the acid test of battle all the Anglo-American theories and plans for the final invasion, that would liberate Europe from German lavery, the composition of the propers of the propers of the control of the

the enormous Normandy invasion as well as for many other landings in the Mediterranean and in the Pacific.

On August 19th, 1942, the day of the raid, the Nazi juggernaut was at the peak of its power. Small Commando raids had been made at Vaagao, Lofoten, St. Nazzire, and Boulogne. But this was to be the

first large scale assault landing against a heavily defended coast. It was to be the Allies' first real challenge to the "invincible" German stronghold, and their first large-scale killing of Boche in that stronghold.

The French seacoast town (Continued on page 43)

Out of same 5000 Canadians, more than 3500 were killed, wounded or missing. Here are a pair of the lucky anes.

Crawds gathered in the city as the Canadians entered.
Fallowing the fierce fight, the Germans left the town.

### TARAWA

### The Bloodiest Battle of Them All

The 2nd Marine Division had to write the book on island assaults, from scratch. And they wrote it with their guts!

T'S EASY to be wise after the event. But it's not so easy when a planned action still is shrouded with uncertainty and the fog of myster

We know now that Tarawa Atoll, in the sandy little Gilbert Islands, sprawled across the Equator, is a venomous rat's nest to invade. But in November of 1943 no American knew that fact. No American yet knew, then, that the Japanese would fight to the death prac-

that fact. No American yet knew, then, that the Japanese would fight to the death practically every time, even for no valid purpose. Bloody Tarawa proved that.

Today we know the weird Nipponese military doctrine of insane, purposeless death-seeking. Now we know that the Japanese will fight like cornered rats for every barren inch of a totally worthless bit of sandy desolation. But that was AFTER Tarawa. The 2nd Marine Division learned these bitter facts for the Americans, at a terrible price—3,301 casualties in a blazing three-day battle. In the process, over 4700 Japanese were killed, while only 17 stunned Japa and 129 Koreans were taken prisoner. The only Japanese taken allve were men too dazed to resist or to commit suicide. That single fact shows elserly the figure agristance the Marines had to hatter down in avery constitute. shows clearly the fierce resistance the Marines had to batter down, in every encounter with the fanatical, Japanese warriors.

Tarawa Atoll is a typical low-lying circle of coral reefs and tiny sandy islands, rising only eight or ten feet above the waters of the Pacific. Its main island, Betio, at the southwest corner of the atoll, averages only about 800 yards in width for all its seven mile length. In 1943 its three-strip airfield and bristling fortifications threatened our advance towards Japan, and offered a valuable base for the drive into the heart of Nippon's ocean empire. Some 18 months before, the Japs had seized this British possession as a bastion of their sea defenses.

From its rest area in New Zealand, the 2nd Marine division, fully reorganized after its bitter action at Guadalcanal, sailed for Tarawa. It was headed for one of the bloodiest battles of World War II.

Betio Island, the target, is surrounded by a solid ring of coral reefs, 500 to 1000 yards wide. Only on its northern edge, where a long pier juts out across the reef, is amphibious landing even possible. Its maze of defenses, manned by a picked force of Japanese Imperial Marines, was a terrific fortress to assault.

"It was like wading over razor blades into an exploding furnace." That's how Private Glen McLeod described it, afterward. (Continued on page 64)

### I was a "MEDIC"

### Back in training camp, it hurt a lot when the infantrymen used

to laugh and sneer at the "eight-ball medics." But once we got

into combat, they sang a different tune. We were heroes, then!

Wounded, almost dead, this soldier lies unconscious in a Belgion field. The Corpsmen managed to save thousands of such casualties.

Saved by the heraic performance of Cambat Medics, these wounded men lie happily oboard a transport about to leave combat zone.

T WAS no honor to be a medic—until combat began. Then, the medics suddenly became very important. GIs who had sneered at us "eight-balls" suddenly became friendly and respectful I know. I was a medic.

When I was inducted into the Army in early December of 1942, they sent me to the 98th Infantry Division. The division had just been activated at Camp Van Dorn, Mississippi, Fresh out of high school, and being a rather quiet, shy sort of fellow, I was pretty depressed at the idea of becoming an infantry dorface.

dogface.

Like many other young fellows, I had thought myself too good for that kind of assignment. With a high school major in science, it seemed to me that a special job, maybe in the Signal Corps or with the Quartermaster, would be where my training could be most useful. But the Army needed infantry soldiers.

Now that it's past, it seems to me that maybe the Army was right after all. In basic training I was all thumbs. Couldn't hit the side of a barn with an M-I. Couldn't keep up with the platoon on a long hike. Couldn't fix a jammed machine gun, much less a complicated radio or instrument.

Now that it's past, I can admit it to myself. From the point of view of the tough cadre non-come I uses an "eight-ball". The cadre had come from the 7th Division. They respected a man who could march and shoot. I couldn't. It was as simple as that.

was as simple as that.

Believe me, it was not for lack of trying. I really tried. But my legs would get weak, and my eyes were not sharp enough on the rifle range. All in all, my name definitely was not one of the assets of the 394th Infantry roster.

Even so, in an odd sort of way the Checkerboard shoulder patch of the 99th meant something to me. In my letters to my folks back home there was a kind of pride at being part of a new fighting division. But (Continued on page 68)

Battle Cry's

### Girl of the Month

Marla English is one of the shapeliest bits
of cuddlesome cuteness that we have ever seen

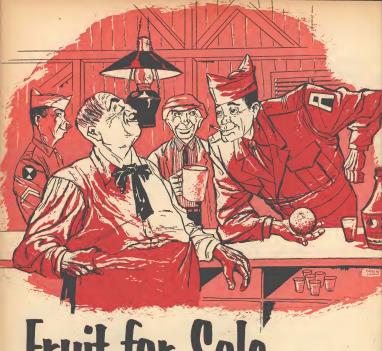

### Girl of the Month continued

Marla, our English muffin is the kind of tasty tidbit, we'd like for lunch!

### Fruit for Sale

by Alfred Whistler

A soldier on a furlough needs cash, plenty of cash. So, if he finds an opportunity to make a little extra, how can you blame him!

T ALL HAPPENED on the way back from a fur-lough. Maybe a few of you fellows remember the system they had worked out during the winter of system they had worked out during the white or 1944-45. It wasn't a bad one, at that. Every week or so, they'd call up some poor sucker who'd been go-ing fox-hole crazy, put him on orders, and ship him back, out of the line, to a little town on the French Channel coast, called Etretat. From there, after two or three days for the usual "processing," they'd hand

him a book full of tickets, put him on a steamer, float him back across the channel, and turn him loose in England, to have and to hold exactly as he damned well pleased, for ten wonderful days.

That part was great. But then, as it must to all pleasant things in life, the sojourn came to an end. the free time was passed and you had to go back. While the thought was rather depressing, there was one factor in favor of it. No completely normal GI had any cash at all left in his pockets, after ten days on the loose. For myself, I was the proud possessor of exactly one, big, round, coppery English penny. Under the old exchange (\$4.03%) that made my net worth a fair-sized fraction under two cents, cash money.

In accordance with my orders, I reported to the Red Cross club, on Edgeware Road in London at the appointed time. There I was furnished with a meal (one), a ride on a bus (filled with other sufferers) and a seat on a special train (destination—Southampton). By late afternoon I was safely tucked aboard the converted yacht (bald-faced lie) that was to sail me back to my rendezvous with destiny.

Now there I was, standing on the deck in the company of two other characters from my division, looking longingly at the erstwhile happy hunting ground (women) and wondering vaguely how I was to spend the next two weeks until pay day. I was not singing joyous hymns to the immediate future. Any hopes of borrowing dough were cast into the dust within two minutes of my reunion with my companions. One was broker than I was-he was completely flat-while the third member of our trio, he was the wealthy one, had one shilling and threepence (pronounced thruppence), worth exactly a quarter. We were rolling, but good. Rolled would have been closer to the truth.

After a bit, a convoy of trucks rumbled up along- . side the dock. They were filled to the brim with crates. A group of sweating refugees from the combat zone groaned out of a shed and began to unload the mechanical beasts of burden. They looked unhappy, even as we did, and from their talk, they sounded even lower. We offered to swap jobs with them, but they paid us no mind. Funny about that. We could hear as plain as day that they were saying they would do anything in the world to get off that lousy detail. Then, when we took 'em up on it, when we offer them a nice, breezy boatride in exchange, they make believe they can't hear us.

Anyway, they finally got the trucks unloaded and the stuff piled up on the dock, near enough so we could almost-but not quite-touch it. One of the boxes was broken. We saw what the stuff was. Oranges! Billions and billions of oranges.

Do any of you characters remember how it was with oranges in them there years? Buster, I'll have you know we saw maybe one or two real oranges in the course of a whole year. Apples? Plenty. Potatoes? Reams of them. But oranges-only in cans, brother, only in cans. The thought of a real one, an eating orange, right there within twenty feet of us, nigh drove us stark, raving mad. We'd have jumped ship of we could

And then came the miracle. They began to hoist

the crates aboard ship.

Now naturally, some of the crates broke. They wouldn't have been orange crates if they hadn't. And when they did split open, some of the nice, juicy fruit spilled out on the deck. We weren't backward. The army had taught us proper protocol, We

dived for them.

Well, now, how many oranges can a man eat? We ate 'em. We ate twice as many as that. We stuffed ourselves as full of fresh, fine orange sections as we possibly could. We stuffed our pockets with extras, and when we had filled those, we went below, grabbed our travelling musettes, brought them up, and stuffed them too. We were finally as loaded down with oranges as a regular has junk after a full hitch of garrison duty. Man, but we were loaded.

It was along about that time when one of us

genuises-I seem to remember that his name was Ben-that's it. Ben something or other, suddenly turned to us and remarked with a smile, "Hev! You guys realize what this stuff will be worth back in France? Those characters haven't seen an orange since before '39. I'll bet they're worth better than a hundred francs apiece!"

"Yeah! Maybe even two hundred," says the other

GI—I think his name was Phil.
"Or even five hundred," I chimed in.

"Yeah!" breathed the other two in unison, "We'll be rich.

"We'll be known as the orange kings. Maybe we'll be millionaires," dreams out Ben, enraptured by the

"And we're gonna be in Paris," I reminded them. "We gotta go through Paris. That's where all the trains end. We gotta change trains, don't we? They can't put on a special army train for all of us. Too many guys here come from too many different outfits for that. So we gotta stop over in Paris."

"How long do you think we'll be there?" asks

"I dunno," I answered him, "It depends on the train schedule. Have to be a few hours at least. Maybe overnight. Who knows. It's gotta be some time though."

"Paris," sighs Ben, "and us with all that money."

"What money?" asks Phil.

"The orange money, dope. Ain't Paris the headquarters of the black market? We'll unload. Even if we have to take a loss, at say fifty francs apiece,

we'll still have enough for a time-whatta time." "I ain't gonna take no loss," says Phil. "With me, it's a hundred francs apiece for my oranges, or

nothin'. I'll starve first."

We were happy that night. Even the fact that the boat had sailed, that we were outward bound from furlough-land, on our way back to dirty duty, failed to put a crimp in our smiles. When we arrived back in Havre, the next morning, we didn't even mind the misty dampness of the open trucks that they had waiting for us. We endured the ride to Etretat without a murmur. We spent the days, two of them, without anything like the rancor usually bestowed upon a safe, ComZ retreat by a line soldier-that is when he is leaving it to go forward, not when he's coming back to it.

And then the day came. At 0800, we marched grinningly aboard the Paris train, in company with 200 sad sacks and began our fateful journey through the heart and soul of France (Continued on page 62)

THEY WERE MEN in those days. Sailors were sailors, not white-uniformed prissies who made all their noise on leave. They knew how to fight in the days of the high-rigger frigates.

When a modern battleship goes out to sea, to stage a battle with the enemy, they heave-to twenty miles from each other and lob shells at each other till (if the stage of the

drive a ball.

That battle was the fight for Lake Erie during the War of 1812... and if there's anyone who thinks it was a cut-and-dry milk run, that it is ancient his-

tory, that there wasn't more blood and heroism per minute in that battle, than almost any major sea battle of the past fifty years, that person is dead

wrong.

The Battle for Lake Erie was no small encounter by two opposing armadas. It was not merely a dustry trial of strength in which a man named Pery came out our top, It was more than just one of the deciding factors in the War of 1812.

It will go down in history as the triumph of a naval genius over the arrogance and inefficiency of his superiors, the inadequacy of his ships, the rawness of his recruits, the strangling stupidity of his fellow officer, and the overwhelming odds of a primed and waiting enemy.

It is a tribute to the strength, audacity and determination of a twenty-eight-year-old man of guts and knowledge—Oliver Hazard Perry. This is his story.

### The Battle of

# 174

Oliver Hazard Perry was forced to

as well as the British, before he

could win his monumental victory!

THE COMMODORE'S NAME was Chauncey. Chauncey wasn't quite a coward, by any means, but he was cautious. Overcautious, many people said. The British were on Lakes Ontario and Erie,

and they had to be met . . and beaten.

The stakes were greater in the Ontario campaign (and the odds were lower), but how could Chauncey conduct two campaigns at once? It was a thorny problem, till advantageously at this time, a request came through from Captain Oliver Hazard Perry requesting permission to serve under the Commodore.

At that point the whole, undermanned, cockleshelled operation on Erie was turned over to the young, fiery Captain.

So Chauncey went off to Lake Ontario, where the chances of totally smashing British power on the Lake were greater than on Erie. But no such thing

happened, for the timorous Commodore, though a seasoned fighter of forty years, was too eager to hold the enemy in great respect. No audacity, only a dragging battle.

While on the Erie, Perry began to realize just what he was up against.

What there was of his fleet was anchored at Presque Isle (now called Erie) which had a good and spacious harbor, but also had a treacherous sand-bar over which there was less than seven feet of water. It kept the Briti h out, but it also kept the Yankees in

Perry had a captured English brig, the Caledonia, three schooners named the Somers, Tigress and Ohio, three other schooners, a brig named the Lawrence, and a 480-tonner named the Niagara. Those and a few other small ships composed the American fleet on the Erie. (Continued on page 72)

## They Couldn't be Licked

At Salerno, the Germans threw in everything but the kitchen sink and the GIs still beat them cold.

by Victor R. Donaghue

"SQUIRREL-headed generals." That, said the newspapers in mid-1958, is what former President Harry Truman called the planners of the Salerno invasion—Operation Avalanche.

What the G.I's and British Tommys called them in 1943 was a lot more pungent. The wisdom or folly that first major invasion of Europe will be argued for years to come. It was the nearest the Allies came to utter defeat and disaster.

Yet, one fact remains sure. Dangerous and doubtful as it was, the Salerno landing did win out. Generals who win can't be as stupid as armchair critics may say.

Ask the veterans of the 38th Infantry Division, the 48th Infantry Division, the Rangers, and the 82nd Airborne Division, about bloody Salerno. Ask the men of the cruiser U.S.S. Seawand. Ask the tough Limeys of the British 46th and 56th Divisions and Commando. Then water the air turn blue as they talk about "that goddam fiithy, Salerno beachhead".

On September 3rd, 1943, right after Sicily was secured, General Montgomery slipped two British divisions across the Strait of Messina, onto the toe of the Italian boot. His slow drive up the mountain-

Dead Germans lie in peaceful rows along Salerno's bloody beach. Mon far man, the GI's proved the better.

ous peninsula easily could be stopped by the Germans—unless another invasion was made farther

The bay of Salerno was the logical place, just at the extreme limit of Allied fighter-plane range. There the major supply port of Naples could be seized, and the airfields at Poggia. The only trouble was that this logic was as obvious to the Germans' as it was to the Yanks and English.

The Italian fascists bad surrendered, and the Germans were hurriedly reinforcing the threatened area. They had eighteen veteran divisions, led by the wily Field Marshal Kesserling, to throw against four Allied divisions. From the frowning heights all oround the 30 mile wide, semi-circular Salerno Bay, big German guns commanded the entire invasion area.

d'Eksenhower, the Supreme Commander, decided to give command of the invading Pitth Army to General Mark Clark. This was Clark's first battle command. The British X Corpe' divisions would land on the north, with their Commandos and American Rangers. The American VI Corpe would land the 36th Division first, in the south, and then 46th Division.

On September 8th some 450 ships, commanded by Vice-Admiral Henry K. Hewitt, U.S.N., moved into the beautiful Tyrrhenian Sea and approached the shores of Salerno Bay. On his flagship Ancon Clark watched the scurrying landing craft head for the

wide-curving beaches.

Some of the fanciful dreams of the Allies soon were to be blown sky high. They had theorized that the Germans would puil back to northern Italy attacked in force. Instead, at Salerno and every step of the way, the Germans showed them that every

inch of Italy would be savagely contested. The hard, bitter fighting was to begin at Salerno. Air experts had said confidently that air superiority would cut German supply lines and force the

ry wount cut ventuals adopty mes and rotes the enemy to retreat. Allied bombers of Air Marshal Tedder's Anglo-American forces plastered enemy communications for weeks, then months, and finally years—in vain. Later. Clark said that the air power theory "was

a complete flop. The Germans kept right on increasing their strength in Italy until the very end and were able to battle us for every foot of Italian soil."

In the end it was to be the personal fighting abilities of the plain G.I. and (Continued on page 42).

by Harland P. Flourie

## Legalized Prostitution: a cure for military ills?

Every day, illegal prostitutes hospitalize countless

servicemen. Since we are unable to stop it, wouldn't

it be better to put the women under military control?

DESPITE the puritantical preschings of highminded moralists, sex in the armed forces is our number one military problem. This is a fact recognized by every social researcher, every member of the medical services both in and out of uniform, every member of the police, Mr and out of uniform, every member of the police, Mr and out of uniform, every member of the police, Mr and out of uniform, overy member of the police, Mr and out of uniform, every member of the police, for the police, for every member of the police, for the police, for every member of the police, for the police, for every member of the police, for the police, for the police police, for the police of the police

urges. We are willing to admit right here at the beginning, that perhaps it ought not be this way. Possibly the mothers, ministers and public hygienists are correct in stating categorically that no young man properly brought up, fully occupied and decently led should feel free to sow wild oats merely because

he is away from home.

Be that as it may, neither the Army, Navy, Air Force, Marine Corps or Coast Guard is physically able to set twenty-four hour watch over 100% of its men. Neither is it capable of repressing urges which are completely natural in young, strong men.

Whether officer or enlisted, the reproductive drive strikes with a power that can be kept under wraps by only the tiniest minority. From pre-historic days, the soldier or sailor on the loose has been an in-

variable seeker after sexual relief.

It must also be said, coldly and bluntly, that where normal sexual outlets are denied, there will always be an outbreak of abnormality. Of the two eyils, the

latter is infinitely the worse.

It is now so common as to defy surprise, to find that the towns and cities surrounding all our service areas, filled to overflowing with illegal prostitutes.

Soldiers know they can find willing wamen in this vice area of Corpus Christi, Texos.

the number of prostitutes increases. It is simple economics. The demand for compliant women is so great as to make even the risks of fines and prison seem well worth the effort. The take from military sex adventuring is maintaining not only the prostitutes themselves, but a host of madams, pimps, and ræketeers in unlooked for luxury.

And the enormous sex pressure is having other ill effects as well. It is casting a pail of doubt over the morality of those groups of fine, patriotic, upstanding and hardworking women, the female military counterparts—WAC, WAF. (Continued on page 45)

Military and Naval police commanders have a mojor problem in the sprawling New York City midtown district. Their task is hapeless.

the same state as the company's home office. Be-cause of this, they finally won the case and the extremely difficult for them to make a case. The

Tommy that decided the outcome Be the high command's plans good, bad, or indifferent, one factor remained certain. Against the tough, experienced German fighting men, came stubbornly determined Yanks and Limey fighting men, to win out in brutal, face-to-face combat. They were the ultimate victors, not the military "geniuses." theorists or

commanders. It was typical at Salerno. When the landing craft neared the heavily defended beaches, German loudspeakers bellowed triumphantly out at them: "We've got you covered. Come ashore and surrender!" Flares shot into the dark pre-dawn sky, to light up the ominous beaches. German guns sited on the shore, opened

up with a terrific roar The Americans and British came in, but not to surrender. They came in fighting and shooting, driving hard up the beaches, to grapple with their enemy German planes, artillery, and machine guns raked the wide-open beaches. Landing craft lurched, shook, and sank under a storm of explosives and screaming rockets and shells. But more came on, undaunted. Men whose boats had been shot out from under them swam and waded ashore and, gasping in exhaustion, pushed stubbornly up the shore.

THE record of individual bravery and gallantry is far too long to repeat. Just for example, take Private Jim Logan. From behind a wall a German machine gun raked the spot he crouched. Three Germans. firing rifles as they came on, rushed out to finish him off. With rapid fire snapshooting he nailed all of themone, two, three Then he picked off the machine gunners. And then, using the German gun, he blasted several other kraut gunners as they fled

from this one-man terror. Or take Private Jim C. Jones. He found about 50 stragglers from decimated landing boat groups lying flat on the beach under a storm of fire. He took command led them up the beach, through a howling gale of flying steel. Then he led them, in dash after dash, to silence one ma-

chine gun post after another. Sergeant Manuel Gonzales. pinned down by an 88 mm. gun firing pointblank, with kraut riflemen all around. He crawled on his belly through the stabbing, searching fire while potato-masher grenades burst all around him. Then, close to the looming "88," he pitched grenades into the emplacement, to kill the en-

tire gun crew take such heroic little units as the Rangers up north near Majori, led by Lt. Col. Bill Darby. Their orders were to seize and hold high ground on the left flank of the invasion area, as an anchor for the landings. They seized a commanding hilltop, and held it through day after day of furious counterattacks

By nightfall the town of Salerno was taken. In their first battle, the men of the 36th Division had driven five miles ahead. The 45th Division had come ashore and had pushed miles inland too. That night it was to meet swarming German tanks and infantry head on, forcing its spearheads to withdraw. The vastly larger German forces were gathering, to try to drive the invaders into the sea. On the surrounding heights the Germans could look down the

throats of the invasion force. Five Panzer-troop divisions stabbed at the beachhead from every direction, while hordes of Nazi infantry pressed down from the hills all around. Salerno was pure misery. By September 12th the whole perimeter of the beachhead was one roaring wall of fire and blazing battle. Kesselring had announced that he would drive the invaders into the sea. German bombers and attack planes roared over the area almost unopposed, despite the Allies' theoretical air superiority. Panzer spearheads drove into the middle of the beleaguered invasion force, trying to split it in half German radio propaganda chortled the prediction that the whole operation was a ridiculous mistake, soon to be utterly

smashed and "liquidated." GIs and Tommys dug in and held on, while roaring waves of attack smashed at them. Their pitifully outnumbered units clawed desperately at whole divisions that came clanking and screaming at them in seemingly endless waves.

ASTILY, General Clark called back to the rear, back in Sicily. for reinforcements. Only an airdrop by the 82nd Airborne could possibly arrive in time to help at all

The final catastrophe seemed to be a breakthrough at Persano. An enemy tank-led spearhead was pushing right into the rear areas. hardly two miles from the shore. The Americans had absolutely no reserve units with which to stop it. The 36th Division staggered back under repeated, massive assaults. Had Kesselring fully realized his op-portunity, and rushed more troops in, the Germans probably would have annihilated the invaders. They had over 600 tanks at Salerno In the depth of this gloomy mo-

ment Clark spotted a critical hill right in the path of the break-through This was soon to be known as Piccolo Peak, for a bitter-humor

The only men not yet engaged in battle were those of a regimental band and some clerks, mechanics and truck drivers. The musicians were issued weapons and placed on Piccolo Peak. The clerks, mechanics and truck drivers, plus six 37 mm. guns and crews borrowed from the 45th Division's 189th and 158th Field Artillery Battalions, dug in nearby This almost laughable mixture of GIs opened up on the approaching German tanks, Piccolo players blew a dance of death at the Huns, and clerks filed bullets and shells in their vehicles, while mechanics and truck drivers hurled assorted hardware at

After several baffled and frightened thrusts, the Germans wavered. and then turned back, followed by blazing fire from the new enthusiastic amateur killers. The next morning planes of the \$2nd's 504th Parachute Regiment came droning over, dropping their hell-for-leather paratroopers right into the lines The Germans were not yet licked Their commanders drove them forward again and again, in constant attacks But somehow the spirit seemed to have gone out of the Huns. They had struck with everything they had, only to be beaten back by a ragged, bobtailed bunch of Yank amateurs. Then, on top of that, the terrible, laughing paratroopers of the 82nd-some of the toughest killers in history-had leaped on them from the sky. It was too much. How could you defeat men who simply would not quit! Men who attacked when they should have surrendered! The grim. stubbern, tooth-and-claw resistance of the outnumbered Yanks took the heart out of the Germans.

To cap the climax for the Germans, next day, on September 14th, came the long-heralded Allied air assault. American and British planes in swarming squadrons blasted communication lines and supply dumps while strafing planes ripped and tore, to and fro, over the German positions. The big guns of the war-ships in the bay, directed from the beachhead, hurled salvos of 15- and 16-inch shells onto the disheartened krauts. The effects of this combined bombardment were devastating. For the first time at Salerno the German superiority in men and material was overmatched by a greater weight of

flying metal. As a follow-up Clark ordered the 509th Parachute Regiment of the 82nd Airborne to drop near Avellino that night. This was the first paratroop drop behind enemy lines, and took heavy losses. Clark was criticized for such a hazardous decision Very few paratroopers could break through back to the lines. But they hid in the hills, raising general hell with the German rear areas, and within two months 80 percent of them safely returned to the Ameri-

Soon after, when Eisenhower came to visit the Salerno front, Clark recommended the relief of General Dawley from command of VI Corps This action was intended to restore the self-confidence of the battered 36th and 45th Divisions. They had fought magnificently, but had suffered from the uneven combat. Maior General John Lucas was given command by Risenhower.

In the week of constant savage fighting the casualty lists had grown to serious proportions. Actually the British sector had suffered heavier attacks than the Americans. British X Corps had lost 531 men killed. 1915 wounded, and 1561 missing. American VI Corps, with only half as many men as the British had there, had lost 225 men killed, 853 wounded, and 589 missing. Many of the men listed as missing in the confused molees later turned up safe and sound as units straightened themselves out.

Reconnaisance units reported that the Germans were withdrawing. The bloody fighting had cost them dear, many times heavier than the Allies. Almost every one of their divisions had been terribly mauledthe 16th Panzer Division, 15th Panzer Grenadier Division, Herman Goering Armored Division, 26th Panzer Division, 29th Panzer Grenadier Division, 3rd Panzer Grenadier Division, and many attached regi-

ments, battalions, and special units. So began the endless, heartbreaking drive north up the rough Italian penisula. It was to be a long, costly campaign, where every advantage of ground favored the Germans. But its ends could be foretold surely. Salerno was the keynote. There

the basic test of fighting men against fighting men had been made, once and for all. The result of that test had been plain, in dead and maimed men, blood, sweat, and pain.

There it had been made clear that

the GI and the Tommy were better fighting men than the much vaunted "Herrenvolk." The American and Briton were more stubborn, more aggressive, tougher, and willer than

the German. Man for man the German was whipped at Salerno-and he knew it. Whether or not the landing there was a wise command decision or not, that vital fact was proved. And that was more important than any command decision.

It foretold what was to be the outcome of the greatest war in history in letters of fire.

#### DIEPPE RAID (CONTINUED FROM PAGE 43)

of Dieppe is just 64 miles south of the English coast town of Eastbourne, across the stormy English Channel. Dieppe is a resort town, flanked by other similar seaside towns- Varengeville and Pourville to the west towards Havre, and Berneval to the east near where the coast turns north to Boulogne and

Calais. ROUGH, QUIET CANADIANS, silent-moving in rubber soled boots, assembled quietly for the fateful raid. Combined Operations HQ., under the then Vice-Admiral Lord Louis Mountbatten, had planned the myriad details of the operation, working with General McNaughton, Canadian Commander in Britain. 2nd Division's C.O., Major General J. H. Roberts, would lead the actual attack. The plan was simple in design,

but complex in execution. Commandos were to land first, to silence big coastal batteries flanking Dieppe. The Royal Regiment of Canada would go in at Puits, and the South Saskatchewans at Pourville. Behind would come the Cameron Highlanders of Canada.

On the main Dieppe beaches would land the Canadian Essex Scottish, the Fusiliers Mount Royal, the Royal Hamilton Light Infantry. and the 14th Canadian Army Tank Battalion. American Rangers would accompany each unit in the predawn assault, to gain experience for later American landing operations. Pre-landing sea and air bombardment and protective fire to cover the withdrawal, were planned in intricate detail.

Aboard the ships plowing slowly across the channel, the men made themselves as comfortable as they could. Games of cards passed the tense, dragging minutes. Poker and "liar" games for small stakes helped to take men's minds off the coming ordeal. Others just sat quietly

and waited. Said Corporal Peter McDonald of Toronto to Private George Smith of Collingwood: "Every man of the Royals will damn well know more about the map of Dieppe than about his own home town Smith grinned briefly, "Nobody would sleep through map-reading

drill if a Nazi gun was waiting as the final test! The goddam Huns know the place well. We'd best know it too! One group of soldiers, gathered

in a foc'sl, spent the time singing ribald songs-"Round Her Knee She Wore a Purple Garter," and other bawdy soldier songs. Then, in shadowy darkness, "Ac-

tion stations" sounded, and the men filed quietly to their assigned posts. One trooper's remark in the tense darkness spoke for all. "It's a good thing the other basturds are more scared than we are!" THE MEN CROWDED silently into the square-bowed landing

craft. Gunners around the Bren gun braced on a starboard thwart, crouched near their weapon. Through the shadows flashes and dull booms on the distant shore told of the preliminary air bombard-ment. The boats wallowed uncertainly for a minute on the choppy water, then turned and

Address Cny Zone State moved towards the open beaches.
On the far left flank, near Berneval, terrible luck struck the Commando unit boats there. By pure
chance a German convoy happened
to be passing by, hugging the shore.
It was escorted by four heavily
armed flak ships and several EBoats.
Smashing fire from the flak ships

Smashing fire from the flak ships fore the boats of the Commandos, wreaking horrible damage. This was a freak break for the Germans that no one could have predicted, the passing guinbast. Almost all the landing craft were sunk, and many helpless men burdened with arms and ammunition sank to death in the buildt and shell torn waters. Only one landing boat got to the shore.

Worse still, the uproar of gunfire near Berneval echoed down the other beaches. Forewarned, German troops rushed to their defense posts at most of the other beaches. Even so, the 20 men of the one boat at Berneval attacked their task force's target, in a breath-taking display of bravery. For four hours they dueled with the 200 Germans and big guns of the Berneval bat-tery, inflicting great damage. Then they boldly re-embarked and withdrew, their mission accomplished. Many men would have turned and fled at such a sickening turn of luck. Not the Canadians! Grim and palefaced even under their black-corksmudged camouflage, they came on

against the alerted defenses.

Ramps crashed down and men
streamed towards the few gullies
and trails leading up from the
beaches Parties of Proneer unit

wire. Cracking explosions blasted
lanes through the defenses. Panting
troopers dashed through, and began
to climb the cliffs and spread into
climb the cliffs and spread into

the fields.

In their fortified howitzer positions the German gunners began to fire at the ships lying offshore. In reply the ships big guns began to spit back. The supporting naval bombardment of Dieppe began, their way towards the town. Their derous sound boomed and echoed across the cliffs and beached

Overhead, flights of cannon-firing Harries dated at the cliff tops, stabling dated at the gun casemates and machine the gun casemate and machine flights to the up. Immbering Beston being the spilled clusters of black bombed own on the fortifications. Running men yelled up at the heedless planes; "Give 'em hell! Blast the bastards!" Out of the seast severe of Men'

Out of the east, swarms of Nazi, planes came racing to challenge the invaders. Messerschmufts, Focke-Wulf 190's, Dorniers, Junkers, and Hemkels, and Spitfires tangled in a swarming, howling melee of dogfights. Quite unexpectedly, the raid had stung the Laftwaffe into full scale action. It was to cost the Luftscale action. It was to cost the Luftwaffe dear in lost planes and puots.
On the cliff tops and in the fields
just beyond, many savage little duels
blazed briefly as the Canadians,
Commandos, and Rangers closed in
on gun positions. Many a little epic
fight took place that morning, with
bullets, greandes, and bayonets.

Private Raiph Prentice, firing a mortar, was hit in the stomach by a sniper's bullet. He stayed at his weapon and kept firing. One of his shells struck a German ammo dump and blew it up with a roar that rocked the earth.

Private Joseph Spero, struck in the face and half-blimded by a shell fragment, charged a machine gun pit with his bayonet and killed three Germans with the cold steel. All over the beaches and fields

All over the bearins and beain with ehaddled figures of deed and with the haddled figures of deed and dans, their eyes rolling with agony, tried to crawl forward to help their mates. That was how it was with the Canadians Sweating with the normal human fear of death and of pushed forward. Bravery was taken for granted.

The Berneval battery, four and a

half miles east of Dieppe, alerted by the chanice action of the flak ships, did real damage to the naval force it sank one destroyer and a number of landing craft. But it was kept busy by the few men who had not reached shore. Otherwise it would have raised havoe with the exposed ships below it. Near Puits. 8-Boats attacked the

Near Putts, E-Boats attacked the Royals' boats. Destroyer fire drove off the E-Boats. But the guns ashore took a heavy toll of the charging Royals. The first wave was almost annihilated.

Captain J. C. H. Anderson, his head bleeding from shell wounds, kept firing a Bren gun from his hoat. Follow-up waves of the Royals pushed doggodly up the beach while men fell like wheat cut by a scythe. Taking terrible losses, they stubbornly kept on, until they had taken their objective.

ewans achieved complete surprise and storned ashore almost unopposed. They were through the wire before the startled German defenders opened fire. Then enemy mortar and shell fire pounded them as their advance spearheads drove into the town fixelf. Dueling with the defended, they opened the way for the control to the power of the control of th

typified the boldness of the South

Saskatchewans. He took command of a platoon when all its officers and non-coms were lost. Then led it in a charge, guns firing from the hip as they ran, to kill 29 Germans and capture a crucial hilltop.

The Camerons drove through, in a running fight two miles inland, killing Germans all along the way. Then they blasted their way out. Eighty percent of the Camerons fought their way back, many of

them wounded.

For four hours the raiders shot and smashed their way through the thick defenses. Meanwhile, Royal Canadian Engineers led the assault

Canadian Engineers led the assault at Dieppe itself. Then foot troops accompanied the Calgary Regiment's Churchill tanks in the assault right into the town. There the Canadian Rasex Sent-

tish, Royal Hamilton Light Infantry, and French Canadian Fusiliers Mont Royal smashed into the fortress town. Guns in pillboxes, hotel windows, the Casino, and the Promenade smashed at their faces.

Through swirling smoke screens the Canadians drove forward against blazing volleys of fire Tanks stopped on the beach or in streets kept firing as steel pillboxes. Cracking grenade and gunfire made a shambles, with dead and dying invaders and defenders scattered all through the burning town.

through the burning town.
Raiders set fire to boats and
barges with streams of bullets fired
into off tanks. Others destroyed the
radio station and command posts.
All the while they snatched military
papers and maps, and herded terrified German prisoners back to the

Typical of the flerce raiders was Lance Sergeant George Hickson of the Engineers. He led a platoon when the officers and non-coms were all killed or wounded, and stormed the Casino the core fort-

ress.
With dynamite charges he blasted through the walls. One of his charges blew in a steel door of a gun emplacement, killing the sixman gun crew. Then he blew up the f-inch gun and several machine gun

The Fusiliers Mont Royal and

Essay Scottish took heavy losses and inflicted worse on their enemies. It would take volumes to describe the dozens of acts of breathtaking courage and boldness of many men But after four hours of shocking, brutal assault, all units of the raiders turned back, as ordered. Their mission accomplished, they each hours in genery reinforcement.

Drawn, exhausted men, fighting every step of the way, moved back to the beaches and re-embarked under ceaseless fire. They brought dead and wounded back with them, as best they could

as best they could.
Once and for all they had punctured the myth of Hitler's Festurg Europa Despite all the Teutonic boasting, they had proved that the Nazi defenses could be pierced. They had put the fear of death and retribution into the hearts of the swage.

had put the fear of death and retribution into the hearts of the swaggering, brutal German "overlords." It had cost much—2,350 killed, wounded, and missing of the 5000 Canadians. Almost half of the raiding force were casualties, with the Canadians bearing the brunt. Yet the great raid was a success.

It was a "reconnaissance in force" that would insure the success of the final invasion—Operation "Over the final invasion—Operation "Over the final invasion—Operation "Over the final invasion—Operation of the final f

"Bloody rough, it was," he said.
"But we showed them what's what
-and what's coming to them!"
And ashore, the stunned German
felt uncertainty rising thekkin in
them. If they lid beer would happen when the full might of the
British, Canadians, and Americans
British, Canadians, and Americans

were unleashed against them?

What happened then, all the world knows. The free men of the western world utterly destroyed the evil Third Reich.

The Canadians at Dieppe had showed them how.

#### LEGALIZED PROSTITUTION (CONTINUED FROM PAGE 37)

WAVE and SPAR, as well as the Military, Naval and Air Force Nursing Corps. The undeserved reputations of these wonderful women makes recruitment difficult, and stains the future honor of untainted girls by the thousand. Though much has been written attacking the slimy rumors that surround these services,

the second-hand stories persist. THEY MUST BE ROOTED OUT.
As a result of a high percentage of patronage enjoyed by uncontrolled, illegal prostitutes, the venereal infection rate is rising daily. The thousands of servicemen, risk-

ing not only loss of activity, but also an impairment of future reproductive capacity, make for a future loss to the entire nation.

In searching for a practical antidote for what is obviously a poor
situation, we must be governed not
by what we want, but rather by
whether want, but rather by
whether of the mass of our servicemen are going to be released in one
way or another, whether we like it
or not. No law, no government, no
code of morals or eithes has even
is highly doubtful if any fegal or

military sex code will ever succeed.

Thus, quite bluntly, it comes down to the choice—shall we give our servicemen women on a controlled basis, or shall we permit them to go and get it for themselves, without any workable restrictions or restraints?

ET US LOOK at a typical case
Pvt. L.—, after completing
his basic training, was shipped to an
outfit stationed in San Juan, P. R.
He was a fairly nice boy So for
that matter, were his army friends.
They tried as hard as they could to
at like good soldiers, and good
citizens, Pvt. L.— was engaged
to a girl, back home in South

But, not only were they good boys, Pvt L.—— and his friends were also extremely normal boys. Their barneks conversation was larded heavily with thoughts and discussions of women. They missed girls and they missed love As their restriction grew, so did their sex

On pass, one evening, they tried the local Red Cross club in the city, and frankly found it extremely dull. After a half an hour they left for

more excitement.

A few drinks at a local pub, brought about the suggestion that the suggestion that are easy to find in San Juan. But the locales of such prostitutes are easy to find in San Juan. But the locales of such prostitutes are officially off lumits. True, not once in tions enforced. But they can be, and this time they were. There was a raid, and Pvt. L.—— and two of the public of the public publ

whelming. For doing exactly what a hundred thousand other soldiers had done—without penalty—he was mow saddled with "a record". It was on his permanent papers. He died would his amount through the would his amount through the would his face them now?

But L — "s troubles were not over. He emerged from a seven day confinement, and went straight to

confinement, and went straight to the hospital—a victim of VD. And what for? For doing what was the most natural and compelling thing in the world, in a manner that could casily have been prevented. There are many arguments on both sides of the ledge.

The prime point brought against any proposal for legalized and formalized protitution in the effect and proposal formalized protituding in the effect and proposal formalized protituding and the arrangement. It has been the invariable make use of pleasant facilities placed at their service. There is make use of pleasant facilities placed at their service. There is offered an opportunity, without hazard or moral stigma, would in large offered an opportunity without hazard or moral stigma, would in large offered and possible them. Thousands of these boys, who might otherwise bring a purity to future marriage, would be, morally speak-marriage, would be, morally speak-

In regard to venereal disease to it possible to control infection in a practical and efficient manner Unless every single action was checked medically the necessility of disease spread would increase For after all how often could even the best Medical Service check the women for intection? Once a week? Twice a week? Once or twice a day? Even so, what is there to prevent a prostitute from becoming infected within five minutes of her medical okay If such were to happen, hundreds of men, using her in anticipation of safety would suffer needlessly It would be difficult to persuade them that danger existed when they KNEW that the women were checked constantly and regularly. It would be an open invitation to let

down the bars, let down the guard

against a real scourse of mankind.

SOME OF THESE arguments can be attacked and others cannot Nevertheless, we are faced with the decision as to whether or not we desire the greatest good for the greatest number. For standing against every point raised by the opponents of prostitution are other equally pergraphy points favoring it. And neither the yesses or the noes are in direct answer to each other. They are rather points that stand beside each other. Unforfunctely we can't have it both ways We must choose one or the other Now, while there are unquestionably many thousands of "good boys in the military services who would never, under ordinary circumstances subscribe to an unrestricted sexual life, there are others, millions of others, who will pursue women at all times. These are the men who pursue the local illegal ladges of pleasure, chase madly after lasses

are going to have women, like it or not. For them, supervised prostitution would be a boon Certainly, their mothers, wives and sweethearts are not going to get back the same innocence they gave to the services Under the present arrangement, these men have been wenching their way around the world. Nothing has been supervised to the services of the services of the services of the services when the services were serviced to the services of the services when the services are not serviced to the services when the services were services were services when the services were services when th

in any vicinity, and often, under the

most extreme pressure, act in an

unwarranted manner in a wild de-

size for sexual pelief. These men

result of the demands made by these men on local girls and women. Local prostitutes, both the illegal ones in the United States, and the legal variety found in many countries abroad have gouged them, infected them, used them for purposes of intelliagence against the interests of intelliagence against the interests of intelliagence against the interests of the control of th

Dispite the potential of venereal infection that must undobutedly exist wherever prostitution is encountered REGARDLESS OF CONTROL MEASURES. It is also true

that constant medical supervision would be better than the complete lack of any anti-infection procedures now in existance. While there would be some disease, there would susquestionably be a great deal less. And in saving even a single source of infection out of every ten. the office of the control of the control of the control of the control of the lines of dollars annually, to say mothing of the gain in human assets

nothing of the gain in human assets At the present time, the Medical services of the military installations are practically helpless. They know what is going on, but what can they do. They can't treat the infected girls. They can't officially or even openly recommend the uninfected ones. They can and do attempt to notify GI's and Sailors about the sick prostitutes, but they have no practical methods of preventing their natronage. Certainly they can place the prostitute off-limits but then - officially, all houses and women of that type are already legally off limits

If the women were under government control, a system of availability would be extremely practical An infected woman could be halter immediately upon discovery. She would not continue for week after week, spreading her scourge without any thought of protecting the servicemen. At the same time, the temptation to use the woman anyway, to gamble, merely because a man has gone to all the trouble of digging her up, visiting her, or because she is the only sex source that he knows, will be removed. The government would provide immediately available alternates

It is true, beyond a shadow of doubt, that there are always prostitutes. Economics, so-cal requirements and physical needs of menments and physical needs of menmen are willing to go to great
men are willing to go to great
men are willing to go to great
men are willing to go to great
ments, to pay hard earned cash in
exchange for sexual favors, this
morfession will continue. The govwould be neither making the gratmin something they were not previously, nor encouraging a profestions to exist that did not already
soon to exist that did not already

exist on its own
Naturally, some sort of control
would be necessary, to keep temptation down to a minimum Curration down to a minimum Curgirls, immature and thoughtless
ten-agers, or new converts to a disgraceful and sinful life. The women would have to prove that women would have to prove that were doing complete with all consequences of their acts, and the fact that they already were professionted that they already were profession-

PROBABLY THE MOST famous example of such supervision in an American Army, was the treatment accorded by the late General Pattor in his Third Army area in the last war. While he never actually lated the houses, or encouraged their use be recognized that it would be alnost impossible to prevent his troops from pursuing local women. So he worked with what he had The houses, in the large cities under his control were kent under constant watch. Prices were held to a regular scale in France that regular scale, in France, unat trolled the buildings to keen law and order, to search for AWOLs and deserters. Medical men checked the girls for discase. Every house listed the location of the nearest Pro-

station, and it was taken so much for granted that EVERY soldier was using the women, that a prophylaxis treatment was a required stamp on every pass issued. Houses that did not meet stand-

ards were placed off limits, and strangely, the signs were respected.

Incidents in Third Army area were at an extreme minimum. The boys, satisfied, were not prone to molest the innocent girls and women of the cities. Women could walk the streets in perfect safety. At the same time venereal infection in that area, was one of the lowest in all of Europe.

Contrast this situation with what happened as the combat zone line moved and ComZ took over. Immediately all houses were placed off limits and all control ceased. Overnight, prices doubled and tripled. The lines of GI's did not grow smaller however Disease rates increased sharply. Off-limits houses were patronized in increasing numbers, and incidents involving sol-diers and local women increased

sharply.

Now of course, none of this proves anything. Merely recording a series of incidents tells nothing more than what happened at one place at one time. It cannot be drawn out to fit a universal problem. It does give food for thought, It does allow a starting point for free and open debate

It's a tough job to face up to this kind of thing. No one wants to see people hurt. No one wants to see good boys suffer. But no one wants to see our present, unrestricted, uncontrolled, sexual misconduct continue, either. Something must be done. The question is what?

Is prostitution, under government sponsorship, the cure? We make no pretense of saying flatly, that it is.
But we do insist that it is a solution worth considering.

#### FROGMAN ICONTINUED FROM PAGE 151

Camp, and then to Underwater Demolitions School, in California. Bewildered, he had been taught to fight hand-to-hand, by tough Marine Drill Instructors. He had learned all the battle guile and fierce aggressiveness of the Marines. Then back to pure Navy, again, at U.D. School.

This first approach to Eniwetok was the easiest part, he thought idly, as he neared the dark bulk of the island. It would be six weeks vet before the vast invasion force hit the beaches here. He and the other men of his Underwater Demolitions Team had to prepare and clear the way for the Marines and G.I's who would storm this enemy sea fortress. He would be here again himself about ten days before the invasion. Then a third time, on the night before D-Day, too. And then hit the beach with

"A nice assignment, this U.D.T.
work!" he thought sarcastically. About 100 yards offshore, he stopped swimming. Treading water, he rode the swells just outside the over the outer coral reef. Only his head above water, he studied the shadowy beach. He could see surprisingly well in the moonlight. If there were sentries or guard posts along his sector of the shore, they were well concealed.

He swam to the edge of the reef, and gingerly paddled across it. When the assault wave hit it, the tide would be high enough to let the landing boats ride over the rect. He made a mental note of that fact. It was important-a matter of life

or death for many men whom he never would know Hissing of low surf rolling onto the beach mingled with the whisper of a soft breeze and faint rustling of palm branches beyond the sandy beach. It would have been a fascinating, romantic night, in peace-

time, he thought. He pulled the graph-paper clipboard off his leg, and snapped it onto his left arm. Took a grease nencil from his sheath, and began to make marks on his map. There, under a palm frond, a soat square outline told of a pillbox. He marked its

There, off to the right a bit, a roundish mound indicated a gun pit. He moved a little closer. A long gun barrel jutted over it, close to the ground Nearby were other emplacements, probably for machine guns, to sweep the beach He marked them carefully on his map. The pre-invasion aerial bombardment would take more than ample care of them.

Carefully he swam and waded back and forth across his beach sector. Ominous mines bobbed in the water, their horns ready to set off a blast on contact. Metal boat traps loomed silently under the shallows. Trip wires etched faint lines alone the sand. Each was marked quickly and carefully on his map.

Once, a broughing noise on the beach froze him into icy rigidity. A figure was coming along the beach —then another. He crouched in the warm shallows. Two Japanese sen-tries went by. He could hear them talkine casually as they went by That had been close!

His wristwatch showed 3 o'clock. Time to start back. If he missed the pickup boat, that would be just too had for him. That was why he had been given the cyanide capsule If he missed the pickup, the boat probably could not risk another run to search for him in the darkness.

That might tip off the whole in-vasion approach. If he "missed the boat," the choices left for him were simple and plain He could swim out to sea until the sharks or squid got him. Or he could swim ashore and try to survive like an animal in the bush. That was damn unlikely on a small island like Eniwetok, No place to hide!

Surrender to the Japs was ruled out. They would torture the facts out of him, and slaughter the invaders when the Americans stormed ashore. So-the cyanide capsule! "Doesn't hurt a bit!" he thought grimly. "Well, the hell with that! Let's make the pickup!" He swam steadily away.

It was nearly dawn when he

P.T. Boat came rushing towards them. As it came near he could see the pickup man seated on the bow of the nickun boat. A heavy leather loop was swung around his shoulder and trailed down over the side. As the hoat neared him rushing along at nearly 30 knots he raised one arm over his head elbow bent The loop would eatch his rigid arm yank him up, and pitch him bodily into the boat as it went by. It all

depended on Jim Purvis, the big pickup man, to catch him like a fish. and swing him aboard the speeding "Whack" His arm seemed to be nulled by a

giant force almost wrenched off his shoulder. The loop had caught. He was pulled flat, breathlessly. Then flung through the air in an arc, to crash down against the nadded side of the boat. He lay there for a mo-ment, half stunned. Then clam-bered quickly back, to make room for the next man to be flung aboard. "Visit number one is nearly over—thank the Lord!" he thought to himself. The boat turned and rushed out to sea, towards the destroyer excert that waited for them. There the Intelligence officers would take his maps, and question him as to what he had seen.

He relaxed slowly. "Nice night for a swim," he said to the wet, tired man next to him.

OUR WEEKS LATER on another bright moonlight night, Dave Gould was swimming in at the beach on En;wetok again. This was no mere reconnaissance trip, this time. He was heavily burdened with blocks of explosives, and containers of plastic explosives. Wires, detoand sub-surface buoys trailed behind him. This was a

business trip. As he neared the underwater mines he swam right up to the deadly metal balls. On their horns he taped blocks of TNT, and fastened lead wires. Some of them he disarmed, his fingers deft and sure as he unscrewed detonators. Any mistake would blow him to shreds, but he worked quickly and skillfully.

tense with nervous anxiety On the underwater tank trans he taped high explosive charges or pressed blobs of plastic explosives. Fastened lead lines to quivering trip wires. Unrecled electric lead lines and trip lines. Strung them out into the deep water beyond the reef

Busily he worked in the phosphorescent waters, connecting his lead lines to the marker buoy, floating just beyond the reef, under the surface. Then anchored the buoy. ready for the electric plunger detopater to be attached on the night

before D-Day.

His underwater demolitions all set and ready, he turned towards the beach again. Intelligence HQ off the beach and into the island He cursed bitterly as he came up to the beach, and strode cautiously towards the tree line.

"What the hell do they want." he thought bitterly, "my blood?" But he went on

Crossing the beach, he felt his skin crawl with fear There were anti-personnel mines under the sand, not yet set off by bombardment. Any one of them might rip his naked legs into bloody tatters. Up the beach, and into the trees. He moved like a shadow from tree to tree. Then an open space. He saw map. Saw a group of buildings back of a clear space Barracks for the Jans! An attack down the road would run right into them. He noted the flat, open areas, good for flanking attacks.
Voices floated down the still air to

him. The place was crawling with Jans. He had pushed his luck far enough Silently he returned to the beach and started back towards his pickup line. It was near dawn when the rushing P.T. Boat picked him up

"Another day, another dollar," he remarked wearily to one of his team mates as their boat roared out to

D-DAY WAS tomorrow morning Off the shores of Enswetck a vast fleet of American ships lay in the darkness. Thundering guns of warships made the night one roaring bedlam of sound and flashing, flaring lights of shellfire Glowing projectiles streaked towards the island, to land in dancing, flickering eruptions. Deep in their dugouts and pillboxes the Japanese defenders cowered, as all hell raged roaring above them. Hour after hour the bombardment went on

Aboard one troop transport, the Middleton, Dave Gould talked earnestly with the Marine platoen leaders whom he was to guide onto

"Get up the beach and through the narrow strip of woods fast. urged. "Set your machine guns up damn fast. Then you can sweep the road and open space in front of the barracks-what's left of them. That's as far as I can lead you. Bevond that, it's up to you guys,

"Rodger dodger," answered a sergeant. "How come you didn't go into the barracks and man them too. frogman?"

"Your father's mustache!" said Gould "What the hell do you guys want? Egg in your beer?" In the landing craft, Gould crouched near the helmsman. He was not naked this time Helmet. pistol, ammo belt, and full combat kit, ready for the assault. A frogman's work is not done until the beachhead is taken.

He pointed out landmarks and guided the helmsman as the boat neared the reef. Overhead, screaming shells passed bound for the shore to keep the Jans down in their

holes Just outside the reef the lead boat slowed almost to a stop. Gould stripped quickly. Picked up his plunger detonator, and dove into

haste he searched for the marker There it was! Treading water while sky and sea trembled under the bellowing cannonade, he fastened the lead wires to the electric detonator box. Pushed the plunger

down, hard Before him. the whole beach seemed to erupt in one vast boiling wall of water, coral fragments, and pieces of flying metal. It was done.

the way was open. Eager hands hauled him from the water, back into the boat. There was no time for self-congratulation. Hastily he pulled on his combat clothing, over his wet skin. Buckled on his ammo belt and out his heavy steel belmet on his dripping hair.

Checked the clip in his gun. The first wave was coming in. He signalled with his hand, "Okay, All clear Come on in!" His boat led the

way, crunching onto the sand. Silence seemed to shout suddenly at him The bombardment had lifted off the beach. Then it began somm deener inland as his heat touched shore. Flights of planes screamed in, overhead, raking the battered area beyond the beach with bombs and guns. Only shattered

stumps remained of the trees he had seen all along the shore. From the pulverized trees and from half-buried pillboxes spouts of

flames flickered out, and cracking sounds spat venemously. The Japs were still there, shooting at the invaders. Roar and counterroar boomed along the shore. Sudden geysers of sand, dust and water flared and fell-mortar shells, burst-

ing all up and down the beach. Down Ramp!" Men came leaning out of one boat after another as their ramps crashed

open on the sand. His platoon of Marines, gathered in a group, looking expectantly towards him.

"That way—around the side of
the pill box!" He yelled and pointed.

His voice was drowned in the uproar, but his hand signal was plain. . The men ran heavily up the beach, and dove to earth in the edge of shattered tree stumps.

"Whap-p-p His leg seemed to be pulled out

from under him. Dull ache in his left leg, near the knee. He pulled himself half erect. He was down on the ground. Bright red patch near his left knee. Throbbing ache in his left thigh. He was hit.

For a moment his mind seemed blurred and hazy. Automatically he vanked his first aid packet from his belt. Wrapped the dressing around

the Middleton two days later. his leg, over the bloody trouser leg. Something stung and bit in his thigh muscle. A fragment of steel! He couldn't stay on the beach.

Faintly he heard a voice above the noise: "Goddamit! Gould, where the hell are you!"

Panting, he pulled himself erect and stood up. No bones broken.

anyhow.
"No bones broken, Dave." He was talking to himself, "You can navigate, boy! Get moving! Get off this

damned beach!" He hobbled heavily up the slope. and into the tangle of fallen trees.

Inched forward to the edge facing the road and open space. Marines were crawling through it moving forward In front of him two men were set-

ting up a machine gun on the ground. He fell down beside them. just as one of them suddenly grunted and fell back still and staring. The other man stared at him, and at his dead buddy, in dazed surprise Gould pulled himself into position

behind the gun, and peered down its barrel "Good field of fire, thought, "right across the flat." "Snap out of it, Mac!" he spat at the dazed assistant machine gunner. Keep the belt feeding smooth. They'll be coming any second now

Someone down the line velled in a high, excited shriek: "Here they come Across the open field a running line of men came quickly towards them. Then more and more-hun-

dreds of them. An officer led them. swinging his glittering samurai sword in circles over his head. They were screaming hysterically as they "Banzai charge." Dave remarked.

as if watching it at a movie. "Keep that feed belt smooth!" He squeezed the trigger, and swung the machine our from side to

side in sweeping arcs. It stuttered into a long, tearing burst-bub-bubbub-bub-bub-bub-bub-Men were falling, out in the flat. Still others came on, endlessly,

screaming like maniacs. The gun clattered on and on-bap-bap-bapbap-bap-bap-A red glow began to show as the barrel became overheated. It grew redder, as the gun hammered on

and on-bub-bub-bub-bub-bub-No time to change barrels now. The barrel seemed to quiver and squirm as he sighted along it. It could not last much longer.

Then they were gone! Disappeared, as though they had evap-orated. The field was full of twisted. sprawled bodies. Dully, Gould wondered how many his gun had killed. He felt sick and faint. Nausea welled up in his chest. His leg suddenly hurt like hell. It was getting dark. Queer, getting dark so early in the morning! Whirling, roaring noise in his head. He fell forward

Dark----dim----dark. Dave Gould woke up aboard He had been carried back by corpsmen. His leg was sore and a bit stiff, but not crippled. Aside from loss of blood, shock, and exhaustion. he was intect "Able to fight another day." the medic told him sardonically

And so indeed it was to be. Dave Gould was to go in again and again with the U.D.T -at Kwajalein, Palau. Levte, and other bitter beaches Quietly, without glamor or glory, he was to do, again and again, the hardest, most dangerous job that any man can do-the job of the

combat froaman. Glory didn't interest this quiet. smiling young man from the big a Chief Petty Officer, eager to re-

turn to the work of production rather than destruction Dave Gould lives in a quiet apartment on Riverside Drive now, buch above New York's Hudson River Like so many Americans, he is ut-

terly unimpressed with his own deeds "Look," he says "the war was a dirty job that had to be done. So we did it. I was suited for frogman combat, so that's what they put me in. That's all." He works quietly, hard, and efficiently for American Car and

Foundry Company now, as a Fabrication Superintendent, Doesn't expect ever to get rich, but takes good care of his wife and five year old daughter, Goes to Campbell Inn. in the mountains at Roscoe, New York. for summer vacations Teaches his daughter Karen, and the other kids there, how to swim, in the cool, spotless swimming nool. Dave can't swim underwater

much, nowadays. One eardrum was nunctured by an underwater mine burst in the Philippines in his last hattle

Life can be wryly ironic, though, even in times of peace, for the "quiet man" kind of fellow like Dave Gould. Last spring he was strolling with Frances his wife along a walk in Riverside Park, one evening. Six young juvenile delinquents stalked them, as easy game for a quick mugging and robbery. Dave is not a big man, and doesn't look or act tough.

But when the six young hoodlums surrounded them, Dave Gould remembered the deadly hand-tohand lessons of his war days. Within a minute three of the young punks were lying unconscious on the ground, one was cowering in Dave's grip, and the others were running in terror.

That is Dave Gould, an average looking fellow, now in his early thirties. Quiet, hard-working, family man, with no liking for violence. Dave Gould-like so many other peaceful Americans. Salt-of-theearth- men, to whom duty, honor and courage are "taken for granted"

Quiet men, who make America

great.

"Pilot to crew. Pilot to crew. All positions report in " We all signed in that awardhing

was normal. Everybody, that is, but the tail position "This is the pilot. What's going on back there, Bob? Everything

okav?" I looked back past the junk into the tail. I could see Bob hunched over his twin fifties, working on them. I could also see that his inter-

com plug wasn't booked in Quickly I punched my throat mike "This is the waist everything's okay in the tail. Looks like he's got a jam on one of his guns. He's working on it now But he's okay '

"Over and out." I breathed easier as I watched Bob struggle into his face mask and adjust the oxygen intake dial

HE TARGETS WERE the subpens at Laurien, France, but we weren't even half way there, when the flack started blossoming up beside the formation. One black puff exploded right under our wing and the aircraft rocked as if shaken by a giant hand.

The shrappel bounced off the skin of our bomber like hall on a tin roof. We lost our number four engine right over the target, but nobody paid any attention, because we were swinging away from that flak corridor. Then the calls started to come through the intercom The whole crew started talking at

once then, and I looked over at the other waist gunner, Gary Weins. He stuck his thumb up and so did I. Everything was okay in the waist, Then I looked back at the tail. Bob seemed to be slumped over his guns The hole must have been a foot long. A long tear in the skin of the ship. Just over his head. Through the opening I could feel the wind whistling by He shoved something toward me . . . something long and thin and silvery. A piece of flak. The sharp pointed edge stuck in my glove as I picked it up. I didn't say anything, but I understood. The flak had busted through the aluminum like water through a bag, and then had smacked against an ammo box by Bob's head. One inch either way

HEY CAME IN out of the sun. THEY CAME IN Out of Black-gray shapes that suddenly hurtled through what was left of our formation, spouting death and destruction in their wake, Another Fort went down. Then they queued up for another attack. And they picked us out as their target .

and we'd have to scrape his brains

off the floor.

Because of the conked out engine, we were straggling behind the formation. And a straggler to a

Pocke-Wulfe is like red rag to a bull There were five of them. when they finished their next pass there were only three of them. They came blasting down toward the top of our bomber, and Len Kurtz, our top turret gunner fought them every yard of the way. I cracked them

with my fifty, watching them lob 20mm shells from their nose cannon at the Fort

"Pick 'em up, tail . . . they're com-

That was Len yelling, but Bob didn't answer. All I could hear was the steady rocketing of those twin 50s of bis. And then there was a roar from the top turret. "He got two of them. Bob got two

more. One's going down on the deck smoking . . . it just crashed! And the other exploded after one burst!" I leaned out of the waist and followed the debris down. The nilot was still in the burning and smooth dering piece that was the cocknit. And he couldn't get out. Fear and panic etched his face as the flames licked up at him. Then there was nothing. Just a puff of smoke where there had been a man. Bob was deadly with those machine guns.

And the Germans seemed to sense it too. For they forgot about the rest of us. They were going to battle it out with this tail gunner who had just knocked down two of their buddies. It was a personal battle now. Just a tail gunner and three Focke-Wulfes.

It was like sitting in on a broadcast of a baseball game Len from his position in the top turret gave us a blow by blow description of the action over the intercom while we waited at our guns and hoped the Germans would drift into our field

"They're lining up now . . . the first one's peeling off . . . here they Then the sharp noise of explosions

as the Folke-Wulfes let go with their wing guns and Bob's answering fire The Fortress shook as 20mm shells exploded against the fuselage . . slowly it righted itself and continued. The battle in the rear con-

"They've pulled up again . . . the last one is smoking in the nacelle must have put a slug in the engine . . . it's leaving . . . heading for the deck . . . that leaves two!' In the waist, we shook our fists

tinued -

at the ceiling . . and wondered how long Bob could go on ... and dish it "Here they come again . . , no

machine guns this time . . . just those damned cannon . . Again the Fortress shook in distress as the shells exploded. But we were still flying. Almost to our own lines now . . .

"Lost a piece of the tail fin . . hey! look at that! Get him, he's going by the water! But there was no need to set him!

He was done for ... the power of the 50s had torn a wing off, and what was once a plane and was now a coffin went hurtling by, spinning, twisting, burning . . . then explod-

One to got Again the announcer's voice in the intercom: "Here he comes that cannon is blinking like a stop light. He's not even trying to hit anything but the fail now

anything but the tail now ... he's got the range now! Hang on! He's closing in . We hung on all right and then we heard the crash! Something had struck squarely in the tail Something sharp . . . like a 20mm shell. We tensed as we waited for the

explosion . . . and waited . Here come the Thunderburde! He's taking off . . . heading West! The enemy fighters had left us . . . we were safe . . . and still flying . I sensed the commotion in the tail before I saw the figure edging toward me. It was Bob ... without oxygen . . . moving like a zombie

toward the waist. And holding something in his hand . . . something I didn't believe . . . I still don't . . . I started to slap him on the back in exhuberance, it isn't every day a

gunner knocks down four Nazis, but he cut me off with a look . . . "I've had it . . . and I mean . . this is the last time . . .

Then he handed me something Something cylindrical ... a 20mm shell

He was incoherent now ... just babbling and bubbling . . "Right in my lap ... it lander right in my lap! And I was glad ... . it landed happy. I waited for it explode . . . to go off . . . to end it all . . . but nothmg happened! NOTHING!"

He was screaming now, and I guess I didn't blame him. Didn't really blame him for what he did next either . He moved to the escape hatch and

hit the release. The door flew out and went hurtling across the sky Bob turned for one last look at the shell, then at the waist of the bomber, and then at me . "Can't go on . . . let them do what they want . . . don't care anymore

... don't give a . . !" Then he was gone. Out the hatch, I watched him fall Down, Down . Down. And then the puff of

white and his chute was open then I lost him in a cloud . . . I don't know what happened to Bob Perlow after that, We tried to

find him, to truce him, but nothing ever turned up. The war has been over for a long time now. Almost twelve years, But

I'm still looking for him. Got a present for him. A real fancy looking cigarette lighter. Made from a 20mm shell. A present for a flaked up fiver

#### GI SUCKER TRAP (CONTINUED FROM PAGE 41)

Some GI buyers have been persuaded that the dividend fillustrations the agents showed these were guarantees of the actual The fact was they were only rough estimates. The payments might very well be less than they were led to helieve.

some sike companies have cleverly tried to trick servicemen buyers into thinking their outlits were government sponsored or approved. They purposely picked sa a title for their company a name similar to that of a government agency. Gullible buyers took the company at name value without taking the time

to check into the company behind the high-sounding title. Watch out for those small-print simmicks! The policy itself may seem very practical on the surface. but read on. Make sure there are no special clauses which could easfly affect any later claims. Such gimmicks as the War Clause, which declares that if the policyholder is killed in combat, only the premiums will be paid to his beneficiaries. Beware also of geographic limitation clauses or aviation exclusion provisions. These special clauses weaken the value of the policy. If any of them are present in the policy, this should be plainly indicated on the document, not buried amidst confusing words where they can be

easily overlooked Grinning, syrupy-voiced salesmen have cornered GIs at embarkation points or on military posts and extravagant amounts of insurance. much more than they actually needed. Of course, this means that the buyer will have to pay high premiums. Often the policies were tied in with the pay allotment method. Through this, the serviceman agrees to let the premium payments be deducted automatically from his pay each month. This is an easy and convenient way to make sure your insurance payments are maintained. Remember, however, that you won't have this convenience when your service time is up. If you've rashly overbought, you'll still have the high premiums to pay when you doff your uniform Then the money won't come so easily. Countless servicemen who have overextended themselves have had to default on the policies later on. A reputable agent will sit down with you and freely and carefully discuss the policies he has to offer He won't want to make a quick sale or put something over on you. Working together, you can both evolve a policy, to your needs. First, remember that the basic purpose of a life insurance policy is protection. The policy should adequately defray the cost and losses which will arise for your family if you die. Ask if the policy will provide the amount your family will need. Insist on seeing all of the policies he has which will provide approximate the heart of the provide approximate the heart of the provide advantages and disadvantages. If you cannot afford to spend too large a sum for premiums, just cover the most important needs first; the others can be cared for later when you

are able to afford them.

New York State's Superintendent
of Insurance suggests, "Before a
serviceman actually signs up for
any life insurance policy, he should contact several agents and if possible secure a comparison of net cost
action of the cost of the cost of the cost
action of the cost of the cost of the cost
action of the cost of the cost of the cost
action of the cost of the cost of the cost
action of the cost of the cost of the cost of the cost
action of the cost of the

Finteragi Compend and Best's Lipt Insurance Reports, 1955. Many agents have copies of these publications or can locate them." In estimating what your family's cost and losses will be so that you will provide enough insurance for them, these factors must be con-

sidered
Immediate expenses. These will
include any medical and funeral
costs, any outstanding bills, loan
payments still due and installment
debts. Also legal expenses for the
settling of your estate.

The mortgage-Here you need to provide enough money to cover as much as possible of the balance that will need to be paid on your home mortgage. Perhaps your wife may want to sell the house instead. Then your policy should leave her with enough cash to cover the mortgage payments for about a year's time so that she will be able to sell without pressure and at the best price. A very practical means available for solving the mortgage problem is the reducing-term-insurance policy. Its premiums are quite low because the amount of insurance is reduced each year as is the balance on your

Living income-You need to provide enough money for your family to live on, especially while the children are growing up. When estimating this, it is best to figure that the children will be included until they reach the age of 18. Also remember that with you gone, living expenses for the family will be that much less. Taxes will be lower as will food and clothing outlays. There will also probably be some social security due your wife, if you have young children. You and your wife should work out a budget of what income she would need should she be left alone.

Emergency money—This includes provisions for sudden illnesses, an income for your wife after the children are grown up and some money for college education of the children. The Institute of Life Insurance, the highly respected public relations

COURSE HIS THE PET LEVER OF CALL

agency for the country's leading insurance companies, points out that there are five ways in which your family can receive their policy payments. None of these is necessarily the best plan. You must decide

which is best from your standpoint. 1. Your wife can garner the complete face value of the policy at once. Receiving a huge sum immediately does, however, present a serious problem. Once the money is paid it is no longer protected from attachment by her creditors.

of these alternatives will afford her this valuable protection 2 The money can be left with the

company and only the accumulated interest would be paid out to your widow. This will give her time to estimate how much money she will need and perhaps she will want to defer some of the unneeded money into another benefit plan. There's one important drawback here though the law limits the length of time the money can be left in the company's keeping. If you decide on this method, make sure you know exactly how it will work out in your policy plan.
3. You might arrange to have the

money paid in equal installments over a definite period of years. Your family would then have a good income during the years when they need it most. You might want these payments to be spread over the school. After that, your wife would probably be able to find employment 4. Perhaps the fixed income option permits you to specify, for example

would be best for you. This plan monthly income payments of \$100 to be paid to your widow, these to continue until the policy value, plus its accumulated interest, is ex-

hausted. This plan is very flexible You can specify the payments, for example, \$100 a month for the first year and perhaps \$150 a month for the second and so on. Your widow will thus he receiving a monthly income in keeping needs as the chil-

dren grow older.

5. Your last alternative is the monthly income for life. This way, your widow will never outline the dollar income you provide.

The Defense Department is vigorously cracking down on the inqueance abuses. Recently, Department regulations governing the sale of commercial life insurance to servicemen were tightened and fortified to further safeguard your insurance investments. The Department now annually accredits the companies applying for permission to solicit oversess. Stateside inetallation commanders have the responsibility for controlling all commercial activities, including the sale of life insurance aboard their installation. Final safety, however, rests with the serviceman-buyer Always be cautious and vigilant When you buy a policy, make sure the agent tells you: The name and address of the company, his name and address, the type of policy, the amount of insurance and premium payments, the death benefit, the guaranteed cash value, the estimated insurance and any exclusion provisions present in the policy.

The Institute of Life Insurance emphasizes, "It is in the interest of the serviceman and his family that he establish as early as possible a sound program through life insurance, for either savings or protec-

Leave nothing to chance.

which will follow him into civilian life. ...

#### REMEMBER MY NAME (CONTINUED FROM PAGE 13)

At dawn we were up. Orders were to move out and keep going north. There was a big ridge about half a mile from the river and road. We were supposed to move up to its top, first, and chase any Gooks we found. I got nervous and excited again. It was my first combat action even though they all said it would be a cinch. There was a lot of griping because B Company always seemed to get the lead spot in the advance. But nobody was really sore. There was a lot of joking about 'Let's get it finished, and go home! We had a hot meal for breakfast Meat hash and hot coffee taste like steak and champagne on a cold morning. Hardly anybody bothered to wear his overcoat or carry bedrolls. We didn't take rations, either, All the company's equipment was to be brought up after we took the ridge. There were about 30 Korean porters with the company, to do just

Heading towards the ridge, we saw that its south face was too steep to climb. The west side and north slope looked much easier. All along the ridge top were clusters of rock and boulders. Two mounds jutted up from the ridge, one near us as we approached. The other, higher one, was not far beyond that. Around the mounds, and in the saddle between them, thick brush covered the earth, Third Platoon swung around the north side of the ridge, to go up it from the rear, moving south, First and Second Platoons moved up the west slope, going east towards the first knoll, abreast. It was about ten o'clock in the morning when we be-

gan to move along the slope. It was hard going up. In a few minutes we all were sweating, in spite of the cold. Halfway to the top. the real business of the day began, with a bang. Suddenly, about a dozen black blobs came sailing through the air from behind some rocks.

Somebody velled "Grenades" and cold. My fingers were all thumbs we all hit the ground

THUDDING explosions whacked around us A man shouted "Goddamit. I'm hit." One man lay near me holding his leg. Blood oozed through his fingers. We were in a fight

My heart raced and labored with exertion and excitement. My stomach felt peculiar, and I belched. This was what the story books called "Wind up." It was almost like indigestion, or upset stomach, Yet, my mind was clear. I was scared, but not

scared panicky Sergeant Gross velled at us. from my right, "Take cover," From bemy right. "Take cover, from oc-hind a rock I pushed my M1 forward and peered up the hill. There was

nothing to see. Captain Wallace stood up suddenly, nearby, waved his hand over his head and shouted "Follow me When he had run only a few stens up the hill, a crackle of rifle and burp gun fire burst out from on ton of the higher knoll. He dived back to earth. Buzzes sounded overheadbullets going by-and rock splinters

snapped off the boulders around us. I aimed at the crest of the knob and squeezed the trigger. The rifle spanged and pushed against my shoulder. It seemed to make an awfully loud noise. All around me rifles and carbines were whacking and cracking

We began working our way upward, on our bellies, from rock to rock. Lt. Weathered sent our platoon sergeant, and three men with a light machine gun, in a dash for the first knoll. The fire at us seemed to be coming from the second knoll and from the saddle between the two mounds. The four men got almost to the top of the nearer mound before they all tumbled suddenly. flopped down like rag dolls Every one of them had been hit. The machine gun slammed down on the

ground Two other men crawled up to the achine gun and righted it. Lying flat they couldn't move the gun around to fire at the upper mound. Nor could they fire down into the saddle, unless they got up to sight the gun. Snarling and snapping fire from above kept them and all of us

BAR men inched around and began firing into the brush in the slight saddle dip. They would rise to one knee, quickly fire a burst, and drop down again Men near the sad-dle heaved grenades into the brush. Grenades came flying out, back at

glued to the earth.

us, in roaring evolutions After one explosion I heard someone yell "The Captain is hit!" Right after that, Noel, one of the colored fellows in the next squad, stood bolt upright and fired a full clip from his BAR into the brush. For a while then the saddle got very quiet.

I still had not seen anybody to fire at Sweat was trickling down my back, though the ground was ice

when I loaded another clip into my rifle. Then, to make me real miserable, my thumb caught in the bolt as the magazine catch released. It felt like my finger was smashed.

Suddenly, back on the second knoll, crazy sounds began. Someone was blowing a bugle. Then there was the sound of a flute, as if a lunatic were playing a shepherd's pipe. Then a lot of rattling and clattering, and many voices talking. It sounded

like Korean or Chinese We fired madly at the sounds for a minute. Then we stopped, Maybe that was what they wanted us to do -waste ammunition. We had little enough as it was. One man near me was all out, and asked me for one of my extra bandoliers of bullets. I gave it to him, and gave the other bandolier to another man. My ammo pouches were still nearly all full.

Hoskins and Murray went back for more ammo Some men in my squad had only two or three bullets Over the field wire, our only link with the rear, the call went back for

ammo and artillery support. We had a radio but it didn't work Potato masher grenades came flying down from the first knoll. As I looked up, suddenly I saw the upper half of a man rise from the brush up there. He drew back an arm, as

though about to throw My rifle seemed to drift quickly around and up. As he rose, my front sight reached his chest, and squeezed the trigger. He stopped moving, suddenly. Then there was a blast behind him and he disappeared in it. Then he was gone, and there was nothing there

It didn't seem real. For a moment I blinked, staring. I had killed a

For a few minutes everything was quiet. No artillery fire came in answer to our call. Probably the guns could not manage to hit the ridge top, from behind the endless series of hills. Murray came back with am-

On the crest, a line of eight men appeared, walking with their hands up. They seemed to be surrendering Their padded jackets were not like those of the North Koreans. These

were Chinamen. All gunfire stopped. One of the ROK's shouted something. He was the one we called "Moonshine." The Chinaman called out something, and they talked back and forth for a few seconds. They seemed to be arguing with "Moonshine."

All of a sudden the Chinks' arms swung forward. Potato mashers flew at us as we dove down. Many of my platoon were ripped by the explosions. Several men fell in twisted positions, and lay still. Some crawled behind rocks, their faces all bloody. We heaved grenades back at them It was almost like a ball game, for a

while. The Chinks couldn't throw as hard or as far as we could. After a while they were all done. No more grenades answered ours.

## ARE UNDER ARREST"

There's a Thrill in Bringing a Crook to Justice Through Scientific CRIME DETECTION!

When ours were all gone, my platoon turned and ran back down the hill. We had no amme and no enemades Behind us, voices screamed mockingly "Come back, GI! You 'flaid? Come back, GI!" We found Captain Wallace down

at the foot of the hill. His face was all cut on one side. Part of his car was gone. He told us where to load up on more ammo. While we were breaking open mmo boxes we talked about the

Chinks. This was the first time Chinamen had appeared. Nobody had believed that they would come in. But they were here, all right. Only a few days before, Gen. Mac-Arthur had flown to Wake Island for a conference with President Truman The radio, and Stars and Stripes, had told of MacArthur's positive assurance that the Chinese would not butt in. They had butted

in, though They were right on top "For all we know the whole goddam Chink army is here now.' of the men said. "And the goddam Russians, maybe." added another, Back on the hill the other platoons were still busy, judging by the noise of gunfire there. We hurried to load up and start back. As we labored up the hill again the noise died away.

It was getting dark. When we reached the saddle hollow, up on the ridge we settled down for the night. If we had known how many Chinks were around us we would have gotten out of there and stayed out. Machine guns were firing up on the second knoll Red tracers streaked past us.

When it was full dark the firing stopped. It was very cold. Some men crawled into their bedrolls and sat up in them. I was afraid to do that We had heard how zippers tammed sometimes, trapping men helplessly. All of a sudden a voice sounded near me. "Don't shoot! Me South Sergeant Gross velled "Gooks!" and his gun blazed right next to my ear. A dark figure tell right in front of me. It was a Chinaman.

Everybody was running around in crazy confusion, Sergeant Gross velled to us to form a circle and get grenades ready. We all flopped down. hugging the earth. Potato mashers came flying up from the brush around us. We heaved grenades down, in reply. Explosions roared all around us.

The man next to me grunted heavily, after one explosion. Then he was still. I reached over and touched his back. It was wet and sticky. My fingers were all bloody. In the moonlight my hand looked black with the blood, I rubbed my hand on the rough grass, trying to clean it.

A loud whistle sounded down below us. As it stopped, a shadowy line of figures sprang up and came running upslope towards us. We heaved grenades. One of mine hit a Chink right in the chest. I heard him gasp as the heavy iron ball bit him. Then it exploded, at his feet. His shadow seemed to spin around. like a ballet dancer, then he tumbled back down the hill. I used to nitch for my high school baseball team

The Chinks kept trying to rush us, always starting with a whistle blast We stopped them with machine gun, carbine and Mi fire, four or five times. Sergeant Gross said "If the stupid bastards only keep blowing that whistle every time, we can keen this up all night.

After the fifth rush our one ma chine gun was sputtering badly. It was overheated, and the barrel was nearly burned out. We didn't have extra barrels. The BAR's had no ammo left, and we were out of grenades. There were only a few rounds left for the mortag

Lying there on the ground, I was scared down to my insides I prayed silently to myself. There was a dead G.I on my left, and little Brasfield. a colored kid on my right, was muttering "No more grenades. Wish we had some grenades!

Another rush started. The whistle blast seemed to stab right through my ears. We fired rifles and carbines. Brasfield raised up to fire, and suddenly froze I heard "thud-thud-thud-thud..." hit his chest. A burp gun had caught him right across the body.

Lt. Wethered shouted "Move back. down slope, Get moving!" Somebody grabbed Brasfield, threw the little fellow over his shoulder, and started carrying him back. The little guy was still alive. I heard him talking to the man who was carrying him. It seemed unbelievable. We stumbled and slid part way

down the hill. Once I fell, and was the last man in the little group, as I struggled back to my feet. Panic almost got me that time. To be left behind, alone, was horrible. I ran heavily, and caught up with the others. Then burp gun fire ripped near us-brr-r-r-p, brr-r-r-rp, and the lieutenant yelled "Hit the ground, here!

There weren't many of us left in the bunch-not more than ten or twelve, in my platoon. We formed a circle again, behind rocks, lying flat on the ground Voices talking Chinese sounded, now and then, up the hill, and out to one side. Some of the wounded men we had brought down with us were groaning. One man, next to

scrounging ammo for his BAR, He gathered a few rounds. Then he couldn't work the bolt. It was frozen shut He urinated on it, and when it was warm, got the bolt working again Off to one side a loud whirring

noise sounded, startlingly close. It was like a party noisemaker. Lt Wethered whispered "Don't fire! Don't waste any bullets on noises! Wait until you see something." It was midnight. Nobody even tried to rest. We talked little, waiting for what came next. Somebody

asked "What happened to that new kid from Chicago?" Nobody knew. They didn't even know the names of some of the replacements who had come up in the past couple of days.

I hoped that if I got hit, at least somebody would remember my name Bob Forhan was not there. name. Bob Fornan was not there. Somebody said "He got it, up the hill" That was all. He had been friendly to me, the night before. Now he was gone. That was how it was. Lt. Wethered whispered to us to get ready to move again. We couldn't

just sit there and wait to be butchered. We picked up our guns, and got ready to go again, single file. The lieutenant told Sergeant Gross to lead, while he stayed at the end of the little line, covering our re-

Quietly, we started. It was very still. As we trudged heavily downhill. I remember thinking bow much noise our boots made on the frozen ground.

Out of nowhere a bright orange ball blazed, right in front of me. A blast of air hit my face, spitting dust into my eyes. Something punched me in the stomach—hard. I staggered back. It was a grenade burst-

ing in mid-air Roars and shouts echoed around me. I fell back, and doubled up, gasping. Nausea rushed up in my chest, and I couldn't breathe stomach felt warm and wet Half

dazed. I knew-I had been hit Somebody grabbed my arm, and yanked me to my feet. He pulled my sym around his neck. From far away his voice sounded: "Hang onto me! Hang on me!" His arm was around my back, and we were half-stagger-ing, half-falling down the hill. My

legs seemed to move by themselves like something separate from me. Noises and mars banged and echoed. I was sick. We plunged and staggered, gasping. I retched sud-denly, and something warm ran out of my mouth, down my chin and under my collar. The warm wetness at my or much was trickling down my grain. Yet, for some reason, there was no stinging pain. My stomach felt numb, warm, and wet, Time stood still. For hours, it

seemed, we dragged and stumbled, down, downhill. Then we were at a road. It was flat and hard, underfoot. Many men were there-maybe thirty-all that were left of B Company

any. A truck was there too, big, square and black in the moonlight. Somebody heaved me up into the back of if I never did find out who carried me to the road In the truck I collapsed on the

left in B Company even remember

#### I FOUGHT THE AMERICANS AT MIDWAY CONTINUED FROM PAGE 7

Late in May, all our task forces sortied from their bases, and headed east, to the attack. En route, we picked up a code message sent by an American submarine, apparently warning Midway of our approach. In our Carrier Striking Force, we were not a bit concerned about it. We could not decode the message. But we nonchalantly reasoned that it served our purpose. After all, we wanted the Americans to come out and fight. We had the foolish vanity of self-delusion My Group was so powerful that

we feared nothing. In it were Carners Akagi, Kaga (my vessel), Hiryn, and Soryu, the mightiest airBattleships Harung and Kirishima. plus Cruisers Chickuma, Tone, and Nagara, eleven destroyers, and several submarines. Not far away, in Admiral Yamamoto's force, were Battleships Yamato, Mutsu, and Naoato, Light Carrier Hosho, Cruiser Sendgt, Seaplane Carriers Chiyoda and Nishin, and nine more destrovers. We outnumbered any nossible American fleet then known to be in the Pacific.

craft carriers affoat. With us were

In fact, we later learned that the American forces at Midway consisted of about 2000 infantry ashore. plus Carriers Hornet, Enterprise and Yorktown, with seven or eight cruisers, thirteen or fourteen destroyers, and a few submarines. This task force waited to the northeast of our invasion track, ready to hit us on the flank.

Late in the day, on June 4th, as we neared Midway, we received reports of air attacks on the southern transport group. Our high optimism began to fade. It was clear that the enemy knew of our approach. Nev-

ertheless, we steamed on.
Far to the north, the Aleutians attack force was having its troubles, too. Our filers and planes were not well prepared for the cold and fog there. Their engines were failing, and little damage was done by

bombing in thick fog.

All the signs were ominous But we were so drunk on victories in the opening battles of the war, that we sadly misjudged the danger. The next day, we were in the attack

zone.

Before dawn on June 5th, from over 200 miles northwest of Midway, our first air attack wave was launched from Admiral Nagumo's carriers. Excitement was in the air, aboard the Kaga.

Loudspeakers barked: "Aviators assemble for the strike!" And soon after, "Launching stations, ready? Start engines!" Shattering uproar bellowed on the flight deck, and livid streaks of engine exhausts flamed in the darkness.

Launching lights illuminated the deck. "Commence launching" sounded from the bridge. The Air foffeer swang his green signal lamp in a circle. One by one our Zero fighters roared forward, and leaped into the air. Cheers of crewmen cechoed above the engines' roars. Then the dive bombers followed to the comment of the comm

Somehow, I was worried, despite the general excitement. We were dangerously near Midway, and with hardly more than a dozen planes left to guard the carrier force.

Fully alerted American defense plans met our planes over the Midplans met our planes over the Midplanes met our days over the Midplanes of the Midplanes over the Mid
planes o

On board Kaga, about 0500, the alarm budge suddenly sounded "hir raid!" Our remaining fighters quickly raced out to intercept. Reports flashed through my Communications Center, confused and uncertain. Enemy places bere, there, all about us. But we could see none. At 0700 we saw them for the first from the other. They looked like torpedo planes. Our fighters wheeled to meet them. Our crusiers and de-

stroyers opened up with racketing

anti-aircraft fire

Black bursts of explosions dotted the sky all around the onrushing American planes Still they came on, hardly above the see's surface. Our Zeros dove through our own anti-aircraft fire, guns blazing at the Americans. One by one, three of the torpedo planes spouted flame and smoke, and then crashed into the

The others kept bravely on. Then they released their torpedoes. As the planes swung away we could plainly see their white star markings. They were B-26°s. Only three got away. Not one torpedo hit its target as our ships turned and maneuvered to avoid them.

At 0850 our own planes returned.
With furious speed our carrier
crews labored to re-arm them.
While this went on, I received word
from Admiral Kondo's force that
an enemy force of a carrier and
cruisers and destroyers was approaching. We turned to meet it.

proaching. We turned to meet it.
At 0930 we launched planes again.
50 Zero's sped to meet another.
American force of 15 torpedo bomberz. We were too many for them.
None of the American planes got through to our carriers. We watched one speck after another, high in the sky, spark into flame and plummet.

down, trailing black smoke.

On board, our men cheered and whistled wildly as our planes scored. Then another group of six planes came in at us, charging in again and again through the anti-aircraft fire. The Americans were brave. Torredoes streaked the water. But luck

was with us. None struck. Zero after Zero exhausted its ammunition, and returned to our decks to rearm. While service crews with the service crews again and again, and 1920 it happened that most of our planes were on deck, readying to take off again. Bombs were curelessly stacked in to be winning steadily.

SUDDENLY A LOOKOUT yelled "Dive bombers!" I looked up. Five black, fat-bellied planes were hurtling down at us. I recognized them at once—American Hell Div-

As I looked, tiny black specks detached themselves from the planes. The specks grew lærger. Bombs, coming right down on us! I was standing on the flight deck, near the tower. Quickly I dove flat

to the deck. The horrible scream of the dive bombers rose to a shriek. Then a crashing roar shook the Kaga. A bright flash glared, through the sleeve I held over my eyes. Then another blast—and another. A gush of hot air washed over me. We were hit—hard! The barking

of anti-aircraft guns began to be mixed with a rushing, roaring sound. We were afre! I leaped to my feet. Horrified, I saw gaping holes in the flight deck, near the amidship elevator. The

MAGNETIC ECONSTITUTE OF THE PROPERTY OF THE

elevator was a twisted mass of The deck plates were a crazy jumhie of torn metal.

On deck, many planes were overturned, in flames. Some stood tilted on their wings, tails up. Orange flame and black smoke boiled up through them, belching out of their tails like chimneys.

I could see, not far off, the Akaoi and the Sorum. They too were aflame, with black smoke rolling from their decks. It seemed unbelievable. In seconds our invincible carrier force had become shattered wrecks. Tears welled to my eyes

It was a terrible scene On deck, and in the Ready Room burned and mangled men writhed and groaned. Deep in the big car-rier's vitals rending explosions shook her. As fire spread, the heaps of bombs and torpedoes began to explode, with shattering blosts Spraying steel fragments ripped the bridge. The Kaga was an inferno, with scorched, blackened men staggering about in helpless confusion The Fire Control Officer, Lieutenant Fiyuma, came to the bridge. There I was awaiting orders, near Captain Okado. The captain stood and stared, half-dazed, like a man

in a dream Fiyuma reported that all passages below were afire. Most of the crew were trapped, burning inside the ship. We had to go to the anchor deck quickly, if we wished to escape. The carrier was beginning

to list ominously. Crewmen were laboring valiantly to try to stop the enormous firesin vain. All power was off. Many men were torn to pieces by the repeated explosions. Surgeons worked like automatons on endless lines of torn bodies. As fire-laden air erupted from the ship, many men collapsed with suffocation I spoke to Captain Okada, trying

to rouse him from his stupefied reverie. It was now near midday. Our escort destroyers, Hagikas and Makaze, could take off survivors. Unless we abandoned ship soon she would take us all down with her The Captain shook his head vaguely. "I will remain with my ship," he said. More planes were coming in. I went to the Ready Room, to try again to contact the

men below in the Engine Rooms, While I was below, other hombers struck the Kaga. Where they came from, I do not know. When I rushed back to the bridge-there was no bridge. A direct hit had smashed the ship's nerve center. Captain Okada and Fiyuma were dead. My good friend Musumi was dead, too Commander Amagay, the Air Officer, as senior-surviving

officer, had assumed command. About an hour later the Kgog was blackened hulk, half-titted over-Then, to add to our misery, someone shouted "Torpedo!" A submarine had loosed a torpedo at us Holding my breath, I prayed as the deadly tin fish came at us, leaving a white wake behind as it approached. It struck. But by some miracle it did not explode. A dud! It broke in half. Some of our men. swimming nearby, after being blown overboard, swam to the floating section of the torpedo. Ironic-

ally, the deadly weapon served them as a life raft. Finally, at 1600, Commander Amagay ordered "Abandon ship!" We began to send men down ropes to our waiting destroyers. The Kaga

was a vast funeral pyre. Over 800 men, nearly one-third of her crew, were dead We watched with tears in our eyes

as our proud Kaon settled deeper and deeper. Boiling smoke and pillars of fire shrouded our beloved ship. At 1800 she seemed to leap in the water as two terrific explosions shook her. Then, still stately in death she sank forever beneath the waves

Not far away, Soruu and Akagi went down, too, with black pillars of smoke marking their graves. We turned to follow Hirus, the only carrier left of our great Striking Force. It was June 6th, a fateful day for Nippon.

Planes from the last carrier reported dire news. The American fleet was closing in for the kill. In it were no less than three carriers -Hornet Enterprise and Vork-

Huddled aboard the crowded destroyer Hagikaze, we looked at each other in silent wonder. But Admiral Yamaguchi, on the Hervu, chose to go on fighting. The Hirvu's planes rose to launch another attack Weak and exhausted as we were, we survivors of Raga cheered as the Zeroes zoomed over us, bound to engage the enemy.

An hour later the planes returned -half of them. They had hit the Yorktown. But while they were gone the sky was full of American planes, attacking the Hirvy and our destrovers. Surely a hundred planes attacked the last of our carriers

At 1700, torpedo bombers, hidden in the glare of the setting sun got through the curtain of anti-aircraft fire of all our ships. Thirteen planes hit the gallant Hiryu, Others hit the hattleship Harvna and cruiser Tone As darkness fell, Hiryu was a blazing hulk. Her last planes had no haven when they returned. We were defeated, indeed

So, as night mercifully hid us, our shattered fleet turned for home. The Hiryu was scuttled by torpedoes from our own destroyers. The long, harried retreat west began But we were not yet finished. At

dawn, as American planes hovered on the horizon, we turned for a last blow at our invisible pursuers. We had only a few spotter planes and two light carriers to see for us. Of radar we knew nothing.

The rest is history, too. In a wild series of running battles, the next day, both sides lost more ships. One of our submarines sank the carrier Yorktown and destroyer Hamman. Our cruisers Mogami and Mikuma and destroyer Arasho were crippled. We were harried and driven west, towards home and safety. Fortunately, foul weather hid our

On June 7th all contact with the enemy was broken. Hidden by for and foul weather, our battered fleet

limped for home. So ended the dream of Japanese empire. The only small prizes we had won were two rocky islands in the Aleutians. Attu and Kiska. neither of which we would be able to hold. The peak of Japanese power had been reached, and passed. From this point forward the road of Ninpon was ever downward, into the depths of slow, sure, and bitter de-

The catastrophe at Midway had been the turning of the tide--and deep in our hearts, we Japanese knew it. Thenceforth the fatal tide of war drove us inevitably on to final calamity and to the soul-tearing sorrow of capitulation

It has been said that Midway was an American victory of intelligence. That is true. Not only did the Americans know our every move, but we dismally failed to locate the enemy forces. So it happened that a smaller American fleet destroyed our scattered groups piecemeal, one by one

In truth, our worst error was caused by our vanity. We underestimated our adversaries, to our chagrin and pain. This was unforgivable, when we well knew the bravery, skill, and boldness of the Americans. We were blind with conceit and overweening confidence. Even so, had we had the secrecy and surprise we imagined, the outcome might have been different.

The final accounting, after the battle, told the full story of our de-feat. We had lost four major aircraft carriers-Kaga, Akagi, Soryu, and Hirva, and two cruisers-Mikuma and Mogami; plus damage to destroyers Asashio and Arashio, destroyer escort Tanikaze, transport Haruna, and oiler Akebono Maru; as well as about 325 planes and thousands of men

The Americans had lost the carrier Yorktown and destroyer Hamman, plus over 140 planes. Com-pared to the loss of our four carriers, the backbone of the Japanese fleet, the American losses were small.

As for me, I was in the depths of despair as we plodded west. Never again was I to sail aboard a carrier. Staff and command officers who lose their ships do not get promotions I was to spend the rest of the war at dull; stupid paperwork, ashore For me, the days of battle glory were over for good.

But at least I can say this: When

Japan fought the epic battle of Midway, in the bright noon of her glory

was there, serving the Mfkado and Dai Nippon

## How to CRACK the education barrier

Is there an "education barrier" between you and promotion? Are young college graduates being brought in to fill positions above you?

You can break down that barrier . . . gain real security, responsibility, prestige . . . surprise Jellow employees and win their respect. You can match yourself against the smartest of the college boys and come out a WINNER. Here's how!

#### AN HOUR A DAY THE I.C.S. WAY!

If you can spare an hour a day, if you have the determination to make good, if you're willing to invest pennies now for dollars later onthen I.C.S. can help you. You can be a man or woman, young or old, skilled or unskilled. So long as you can understand simple language and illustrated training manuals, you need have no doubts. The L.C.S. hour-a-day plan is SUCCESS-PROVED. You learn while you earn—anywhere, any time.

#### Just pick the subject you want!

Only I.C.S. offers you such a wide range of subjects to choose from. Drafting. Engineering. Television. Aeronautica, Business, High School. 25 courses in all. I.C.S. is the oldest, largest home-study school. It is alm the best known in business and industry.

#### Free catalog plus free books!

When you mail the coupon below, you get a complete catalog on the subject you check with information abused unaphopment opportunities, training requirements, etc. And you get "How to Succeed"—38 pages of valuable tips on winning recognition, pay raises, success. Also, a free sample lesson in basic mathematics.

Five hours later, we debarked in the city of light and discovered to our modified pleasure, that the next train north left at 1945 (that's 7:45 PM. in case you've forgotten). Six and three-quarter hours was too long for us to make a claim stand up that we didn't have a chance to

make it, but it still left us SOME freedom in the renowned city. We didn't have any carfare-vet so we set out walking toward the Boulevard Clichy. That's where we'd been told the "live" part of town was, and a "live" section was what we needed right then We didn't know our way very well, but passing GI's put us on the right track, whenever we strayed too far.

It was only a little after two in the afternoon when we arrived Now that we were there, all we had to do was find a likely place to begin our prospecting for orange gold. And that wasn't quite as easy as it seems. Remember we were complete strangers in that part of the world. It may be all very well for a fellow who has any knowledge at all about a burg, but for us— well, Paris was wonderful, but only by reputation. All the places looked

alike. There were row on row of them, bars, clubs, cafes and saloons of every type and description Which would give the best results Damned if I could tell! But if I was doubtful Ben wasn't

You'd have thought he'd been in the fruit business all his life and the black market nearly half of it which wasn't too far wrong. I'd seen Ben operate before He looked up and down the street,

speculatively, then, making up his mind with a sudden determination, he pointed at a crummy looking corner joint diagonally across the street

"That's it," he sings out, "We'll try there, first." It almost seemed that luck was with us, that first try. The bartender spoke English. As we walked in we saw that the place was empty. That wasn't strange. It was a little early for drinking and besides, at two in the afternoon most characters, in the Army I mean, are working. Those who have drag enough to get off duty at that hour, usually have sense enough to hit a classier joint.

anyway. The barkeen pulls out a dirty rag starts wiping away at his bar, puts on a smile that would have done credit to a professional MC and blurts out "Hello boys! Cognac? Wine?"

Ben grinned right back as he eased himself up to the bar, kind of slowly. He hit the rail about three-quarters of the way down. between the barman and the front door. As the drinkmaster turned toward him. Ben crooked his finger. leaned over the bar, confidential like, looked sideways, and waved the man to come closer

The barkeep looked interested. "Sav bud," Ben began, "you interested in oranges?"

"Oranges?" The barkeen looked nuzzled "Veah" drawls out Ben. "Oranges

Real, honest-to-God oranges. Here look." He takes one out of his overcoat nocket and holds it up The barkeen looks at the fruit for a second and a hig smile lights up

his face. He reaches out to take the nice round offering "Why thanks hove Merci Thanks very much. I haven't seen one of

begins pecling it, slowly. "Have one on the house, all of you." He takes out three shot glasses and carefully pours us each some cognac Phil nudges me hard. He's grinning almost as much as the barkeen

We're in." he whispers in loud softo voce that might have been it was no go, at all heard three blocks away Ben turned around and looked at

Phil coldly, "Ssh," he said. Phil shut up and sipped at his drink. I said nothing, but watched attentively

ly, rolling the clean, brown, tasty liquor around his mouth before swallowing. He said nothing at all during this interval. The barkeen kept watching him, the smile still on his face, as he stuffed the orange sections into his mouth

Finally Ben finished the brandy. "Good cognac," he announced with appreciation. Ah, say nothing," interrupts the

barkeep. "It was my pleasure. Thank you for the orange "You like, buh?" says Ben, "How'd you like some more? The barkeep shrugs his shoulders

and spreads his hands. "Alas, a man is only human. I should like them fine, but still . . . how many times can I give drinks for fruit. I must make a living, you understand. To indulge myself is very pleasant, but hardly profitable "

"Profitable," repeats Ben. "Now we're coming to it. We're interested in a profit, too. We've given you a sample, so you know they're good. How would you like to buy a couple of dozen oranges . . . cheap

"And what would I do with them?" asks the bartender "Why resell them, at a profit," says Ben. "Alas, my friends, you do not

understand. I am not a fruitseller." "You don't get it, friend," Ben answers. "Of course you're not a fruitseller. Nobody said you were profit on them. Oranges aren't that easy to come by, these days, you know." "It is but too true," replies the barkeen. "but non. Merci, merci beaucoup, but no. I think not, today. You boys want to buy a drink?" Ben argued with him for twenty

minutes. No soap. The old hov just couldn't see it. Conversation, he'd buy, but not oranges. He was interested in getting hold of our money, not giving up any of his. After a bit when he realized that we weren't buying his likker, that we couldn't, even if we wanted to be even turned

a little nasty. I guess he felt he'd wasted enough time on non-paying customers. At last, he just turned away, took out a newspaper, and began reading.

We came to the reluctant conclusion that he wasn't interested in our proposition.

Damn it, we tried. The Lord knows we tried. For three solid hours we wandered up and down the street, attempting to peddle our supplies. One drink, we could get occasionally. Phil and I talked our way into something else, in exchange for oranges . . but we won't talk about that. Still, when it came to cash money on the barrelhead.

We began to go slightly nuts with disappointment Even Phil sad reluctant Phil came to the point of agreeing to cutting our asking price. When it became obvious that we wouldn't come anywhere near a Ben didn't hurry. He drank slowhundred francs per orange, we started asking fifty, then twentyfive, then ten, and finally even five francs. At five, the stuff was cheap-er than the official ration price . . .

when there was any to be rationed Paris was willing to eat our offerings, occasionally even trade for them. But when it came to dishing out money, the poor people of Paris said "no," positively and absolutely

Outside the Red Cross Club, Phil managed to trade a half dozen of our prizes for a packet of pictures. He was all up in the air about that, figuring HE'd made a strike. But later, when he opened the package, he found that he was the possessor of some two dozen intimate views of Notre Dame Cathedral.

It was a long and dreary ride, back north We hoped the train might break down, or something, but it didn't. And sure enough, there was an officer to meet us at the station who "kindly" set us aboard proper transportation back to our own little foxholes. Sad!

I didn't see Ben or Phil again for quite a while. But actually, I didn't come off too badly, at that. I'd had a first rate furlough. All in all. including travel time, processing time and free time, I'd been away from my happy combat plateon for almost three weeks. I'd had a helluva good time for my money-and managed to make back a good part of it . . . selling fresh oranges to the guys in my company. Two dozen oranges at a hundred france appece

Rear Admiral Shibaski, the island's commander, had boasted: "A million men cannot take Betio by assault, in a hundred years." One division of United States

assault, in a hundred years."
One division of United States
Marmes took it by assault in three
days, despite his boast. But they
days, despite his boast. But they
strip of sunbaked coral sand. They
paid in deed and maimed young
Americans for mistakes and inadequates of planning, organization,
pulse of the despite of the planning organization,
hard lessons that were to lead to

victory.

Enemy patrol planes had spotted the convoys converging or Tarawa, and the defenders were alert and ready when the proliminary bombardment began. For three dasbefore the landings Yankee warships pounded the island intermittently with gunfire, and carriertently with gunfire, and carriertently with gunfire, and carriertenly with gunfire and gunfire and

only seemed enough!
Lesson number one was learned—when the invaders found most of the fortifications instact, on landing. It needed days, not hours, of bombardment to silence shore defenses.
They had to be pulterized, not merely damaged, in order to put

them out of action. In the night of November 21st the troop transports November 21st the troop transports Debt of a standard and the standard

Lesson number two. The transports had drifted too close to the shore. Charts and maps had not been accurate enough, and the rendexvous spot had been planned too close to the enemy's guns. Now the loading of the assault force into their boats would have to go on under fire.

Luckily the Japanese gunners were not crack shots. Even so, smashing near-misses deluged the troop ships with cascading water and whistling shell splinters. Men began to topple. The assault had not

vet begun.

American battleships, cruisers, and destroyees of Task Force 33 opened up with thunderous counter barrage, trying to silence the shore batteries. In vain Two or three of the particular that the shore t

them. It was a very poor beginning

Rearing naval fire and screaming carrier plane strafing covered the retreat of the vulnerable transports First the warships' guns fired, and then the planes attacked. Navy guns fell silent while the planes bored in in order not to hit their own planes Worse yet, the planes were late in coming. In the intervals the enemy guns opened up at the troopships Lesson number three. Coording. tion of naval gunfire and airplant attacks was too uncertain. In later operations the big guils would not cease fire while the planes strafed the beach. The fulls were too costly for the ground troops, and the danger of hitting a friendly plane was too small to justify endangering the basic fighting force-the foot soldiers. Better radios were needed.

Meanwhile two mine sweepers,

Meanwhile two mine sweepers,

Pursuit and Requisite, boldly moved

On the jutting 500 yard Burns-Phillips Company pier, Li, William Hawkinia and one platoon of socut suipers landed first. In a brief blaze suipers landed first. In a brief blaze machine in the scienced a Jarmachine from the shore, this handful of Marines lent the only direct support to the wading lines, with their few rilles and BAR's, with their few rilles and BAR's.

Straight across the red came most of the heavy-burdened men, moving at a snail's pace Many moving at a snail's pace Many moving into hidden potholes, drowned unseen, weighted down by wearons, granuades, and bandoless wearons, granuades, and bandoless the face, chest, or head by bullest therefore, the shadow of the straight of the becoming lump and still in death therefore the shadow of the s

small effect

Here too was lesson number four. In the future more amplitracks am

on Tanswa's reefs, and the assume became a slaughter of holless infantrymen, the order came to land no more men Until darkness came to protect them, or until the enemy guns could be silenced, the men who reached the shore were on their own. Isolated, they dug foxholes "with their stomach muscles," while Jap machine gun fire raged over

Men in the boats beyond the reef wept in rage and piy as they stared across the reddened waters dotted with bodies of their firends and buddies. Some men screamed and buddies. Some men screamed and pulled with frustration and butterness as they saw their buddies, in plain sight, cowering on the narrower beach, unable to move, while the properties of th

Dotted across the terrible reefs were burning hulks of wrecked amphiblous tractors and shattered beats. Smashed LVT's and floating bodies tossed and rocked slowly under a pall of drifting smoke. Remnants of the lead battalions

of the final state of the leaf to the leaf of the state of vivors of the anault wave guithered of the state o

Bravery born of desperation added to the natural gallantry of the traditionally brave leathernecks. The words of one unknown noncom on that fiery beach, roared above the bedlam of furious uproar. enoke for all the men there:

'Move up! Goddamit, move up! We stay here and die, or move up and die. Let's move up and kill some of the bastards anyhow!" In the teeth of a storm of flying

bullets, the gyrenes began to move slowly forward. Little spearheads of men crawled up, infiltrating the Japanese pill box and gun pit positions. The thud of grenades and deeper banging roar of BAR's began to sound above the steady, shrill vammer of Jap weapons.

Colonel David Shoup, the division D-3 (Operations Officer) and newly appointed C.O. of the 2nd Marines R.C.T., had waded ashore with the assault waves. He took command. Knowing the island terrain, from having beloed plan the invasion, he coordinated the incredibly brave attackers. Under his direction, runpers. wire and communications nuckly spread across the beach. Then the scant hundreds of Marines began to attack the thousands of defenders with deadly coordinated

effectiveness Calls for air strikes went unanswered. Finally one strike was deivered, only to hit the remnants of K Company. Profane Marine messages then told the air message center to keep its "f---- planes" away. No further air strikes were used Here was another lesson-numher five. A far better system of air support communication and control would be evolved after this sour ev-

perience. Otherwise American air superiority would be wasted Late in the day a few tanks were brought to the reef edge. Men on foot guided them across the reef, with the inevitable results. Guides were killed one after another, by the raging machine guns ashore. One tank after another sank futilely

into deep potholes.

A half a dozen tanks did get ashore. They did good service. For the first time these were not lights, armed with inadequate 37mm, turret guns. Still they wasted much effort trying to flank pillboxes, thus exposing their less heavily armored sides and bellies to direct cannon fire. They beat off one Japanese tank-supported counterattack, stop-

ping the small Jap tanks cold. Lesson number six. Henceforth only medium tanks, Shermans armed with 75's and flame-timowers, would go in with assault landings, right onto the beaches. Then they would attack head-on, their thick frontal armor and big guns bulling and smashing a way for the foot troops. In turn the ground troops would guard their sides.

All these lessons were being paid for, on Tarawa. Paid for in blood. sweat, agony and death of valiant Marines.

At evening of the first day the Red 2 beachhead was only some 300 yards long. Survivors of four bat-

tered battalions held a perimeter line hardly more than 50 yards deep in most spots. On Red 1, only a few isolated men stubbornly held another tiny footbold. There, the company commander of F Company had a total force of 47 men six from E Company, 16 from E Company, 10 from C Company, and 15 from H Company That was what was left

of those companies.

Night was bright as day on Betio. Gasoline supply and ammo dumps were burning all over the island Moonlight, leaping flames and the glare of muzzle blasts illuminated tre shore brightly. All night long, cannon and mortars bellowed across the low, sandy strip of land. Streams of orange-red machine gun bullets laced in intricate patterns across the

sands.

Amazingly, the Japanese did not emerge from their underground fortresses. Had they done so, they might easily have swept over the pathetic little groups of Marines in the ragged perimeter line. So, instead, all night long men and supplies streamed painfully ashore heedless of the constant gauntlet of fire. The Marines took their losses, filled the gaps, and kept coming in. Dawn of the second day had a ing. Losses had been chilling Tired thirsty, haggard men knew that this was "a bad one" They knew that many more eyrenes would fall here

But they knew, too, that Tarawa

would not defeat them. Cost them-

yes! Beat them-no!

Two battalions of the 6th Marines came in at dawn of D+1. They were to deliver the knockout blow for which the assault waves of the 2nd and 8th had set the scene. The third battalion of the 6th went across the lagoon to Buariki Island. That move to Buariki was eloquently characteristic of the spirit of the United States Marines. The move was aimed to cut off the escape of the Japanese. With a mere handful of Marines attacking thousands of entrenched enemy, another handful swung around to cut off possible escape by the vastly greater enemy force. Such sublime selfassurance, even on the brink of disaster, is breath-taking. They were

any doubts. Now the leathernecks in the two little beachheads were ready to go. They were hungry. Only one day's combat rations had been carried along. But they had fresh, tough, vengeful companies now, at full strength. They had some tanks, both light and mediums. They had some pack artillery for close sup-port, a battalion of 10th Marines artillery. They had satchel charges for the blockbouses, and mortars to keep the enemy down.

the "best damn fighting men in the

world," and they knew it, without

son," now we can fix the little louses right. Shove the satchel charges down their throats."

This was close-in, face-to-face combat. The kind the Marines consider to be their specialty. Creening and crawling Savage blasting of nill hoves Murderous sourts of BAR and rifle fire Brutal melees with gun butts, knives, and shovel edges

Slowly, but with deadly sureness and creeping steadiness, the perimeter line moved shead. One by one the nillboyes were battered by the tanks Seared by the flame-throwers, split and shattered by satchel charges, raked and ripped by bursts of gunfire and then left behind as smouldering, reeking pits full of dead Japs. Nightfall of D + 2 found the Marines in full possession of a strip clear across the narrow island. The defenders were being crowded into pockets. There they could surrender or die, as they chose. They chose to die. It was a rarity for any Jap to surrender

Just after dark the long-expected enemy counterattack came at lasta banzai charge in the old samurai style—waves of screaming fanatics waving swords, knives, bayonets, and grenades. B Company of the 6th Marines took the main shock. BAR's and machine guns decimated the on-coming lines. Even so, the charge did reach the first foxholes. There in a wild, swirling melee of knives, rifle butts, swords, and shovel edges, gasping, hysterical men beat and stabbed each other to

death One Jap got clear to the company commander's foxhole. The C.O., Lt. Norman Thomas, beat out the Jap's brains with the butt of his empty 445 T

The Jans died, every last one, More and more waves came on, in howling hysteria, only to be cut down and butchered by the glaringeved Marines. Morning of D + 3 dawned over a horrid scene of over 450 sprawled, bloody bodies, Among the heaps of dead sat gaunt, holloweyed spectres, young-old Marines with the stare of battle shock in their sunken eyes, their lips cracked and parched with dried blood.

But they had won Not a single Jap had broken through the thin groups of tough, efficient Marines. The Japs had thrown their worst, their hardest blow, and it had not been enough. The gyrenes might well feel weary, but they had earned their rest. Young and old, alike, veteran or rawest recruit, the Marines had landed and had the situa-

It really was over that third morning. The Japs were through More men would die in the mopping up, but the outcome was certain. In their underground pits and pillboxes, the Nipponese soldiers began the mad ritual of hari-kart-formal, religious suicide, with grenades "Okay," said Sergeant Iim Nieltheir own mouths or brains, or samurai swords thrust into their

tion well in hand.

own bellies

On Buariki some 150 Japs were

found by the 2nd Battalion of the 6th Marines, and were methodically butchered at a cost of 32 Marines killed and 60 wounded. Apamama Atoll some 76 miles south of Tarawa,, was taken in two days by two plateons of V Amphibious Corps Recon Company, carried there by the submarine Nautitus.

Meanwhile, the other major of the Makin Atoll, was taken easily by the Army's 27th Infantry Division, against relatively light resistance. In less than a week's fighting the Americans had seized the Gilbert Archipelago

Bloody Tarawa will not soon be forgotten by the United States Marine Corps They paid a high price for its few hundred acres of bare sand and coral. General Hol-land Smith, veteran Marine commander later said that it was not worth the price-that it should have been by-passed.

Still, it is easy to be wise after the event. Nobody had guessed what a bloody toll Tarawa would take Admirals King, Nimitz, and Spru-ance, and Marine General Julian Smith, all agreed that the capture of Tarawa and Makin was a necessary prejude to the next advance to the Marshall Islands. Their airfields allowed land-based Army planes to attack the Marshalls heavily and soften them for invasion

More important, the learned at Tarawa were to change the entire character of American amphibious warfare doctrine Every man who died at Tarawa saved the lives of many other Americans in later seaborne landings Changes were made as a result of these costly lessons, in tactics, air support, communications, weapons, and equip-

ment It may well be sickeningly unfortunate that these changes came too late for the men, the brave men who died and suffered on Tarawa's bloody beaches, but it is also true, that before this awful battle, there was hardly a precedent for such a massive sea invasion. The lessons had to be learned somehow, and knowledge, expensive under any conditions, is doubly costly in times of war.

Bloody Tarawa was not in vain. The men who died there did not die in vain. They learned, with their agony, for all other Americans what was needed to win through to final victory in the Pacific

But most of all, Tarawa stands as an object lesson to any aggressor, present or potential, that America can fight. It showed, as nothing else could ever show better, the tremendously indomitable will of the average American citizen. These Marines, the vast bulk of them, were the volunteers, the citizens of their country, up in arms to defend the way of life in which they firmly believe. They have done it before, and, if necessary, they will do it again. ...

## WILL YOU SPEND \$2 TO SAVE YOUR HAIR?

How many hard-earned dollars have you spent to save your hair? How many hair tonics, gadgets, restorers, electrical devices, have you tried in the last few years—with no success? How many times after an unsuccessful hair-growing othersy have you sween not to spend another cent on another hair treatment?

Yet, you buy the next product that comes on the market with hairgrowing claims. Stand in front of a mirror, take o

Stand in train of a mirror, just of long hard look at the top of your head. What have you to show for the money you spent on hair restorers? Do you have as much hair as one year ago? Do you see any signs of new hair, or new hair growth? Why the failure?

#### CAN YOU GROW HAIR?

Doctors who have spent a lifetime studying hair and hair growth have cancluded that nothing now known con grow hair on a bold head. So, if you are bald, prepare to spend the rest of your life that way. Accept it philosophically and quit spending hard-earned dollars on hair growers.

If you can't grow hair — what can you do? Can you stop excessive hair loss? Can you save the hair you still have? Can you increase the life expectancy of your hai? Probably. Please read every word in the rest of this stolement carefully, incre in may mean the difference to you between raving your hair and losing the rest of it to eventual BALDNESS.

#### **HOW TO SAVE YOUR HAIR**

Itchy scalp, hair loss, dandruff, very dry or oilly scalp, are symptoms of the scalp disease called seborthea. These scalp symptoms are often warnings of approaching belidenses. Not every case of seborthea results in baldness, but doctors now know that men and wamen who have this scalp disease usually lose their hair.

Seborrhea is believed caused by three parasitic germ organisms (staphylococcus alibus, pityrosporum ovale, microbocillus). These germs first infect the sebocones glands and later spread to the hair fallicles. The hair fallicles atraphy, no longer can produce new hairs. The result is "thinning" hair and baldness.

Many men and women suffer needless warry and heartache as they peer into the mirror at their retreating hairlines. Worse, they suffer needless loss of hair because today seborrhea can be controlled—quickly and effectively—by treating your scalp with the amazing scalp medicine called Ward's Formula.

#### DOUBLE MONEY BACK GUARANTEE

In seconds, Word's Formula kills the three porositic germ organisms retarding normal hoir growth. This swift permicidal action has been proven in scientific tests by a world-famous testing lobprotony (copy of laboratory report sent on request). Ward's removes infectious dandruff, stops scalp itch, brings hair-nourishing blood to the scalp, tends ta normalize very dry or oily scalp. In brief Ward's Formula corrects the univ symptoms of seborrhea, stops the hair loss it causes. Ward's Formula has been tried by more than 350,000 men and women an our famous Double-Your-Money-Back Guaruntee. Only 1,9% of these men and women were not helped by Ward's and asked for their double refund. This is truly an amazing performance.

Why not join that men and women who have successfully anded thair twolsbert Trend your copie in Wird Voff Sormulo. Try it are too risk. In only 10 Gays you must see and feel the monked improvement in your scolp and hot; Now dandriff must be gone. Your scalp it have stoped, Your host must look intilakter, more entireduct, and aller. Your seasons have it was must stop. You must be completely satisfied—in only 10 Gays—with the improved condition of your scalps and half, or simply return the unusued parties for Double Your Money Back. So why dailsy? shoulder was soaked with bright n

Automotically. I cut his clothing clear at the shoulder, and found the wound—a jagged, gaping hole in his shoulder. Blood was pumping out in regular spurts. A severed artery, for sure. He'd last only a few minutes, unless I could stop the loss of blood. He already was too far gone to know what was happening. I pushed my left hand under his

I pushed my left hand under his shirt, and felt around in the warm, slimy blood for his chest pressure point. Pressed my thumb down hard. The pumping out of the open wound stopped. I had it right. My hand was warm and wet with his blood a repulsive feeling. But I held it tightly pressed down.

The other soldier in the big foxhole was standing up, his muddy combat boots pushed sagainst my legthe was firing at something—wheng, whang. Empty cartridge cases, hot from the ejector, fell into the hole next to me. Crashing mortar bursts shook, the sides of the wet fox hole. my kit and got out a bottle of beasma. How the very managed to tie

plasma. How I ever managed to tie up that shoulder wound and get plasma flowing into his arm, I'll never know. When it was done. I pulled at

When it was done, I pulled at the trouser leg of the standing soldier. "Got to get this guy back to Battalion Aid Statton," I gasped. Somehow I crawled back out of the slimy foxhole. Somehow the other dogface hoisted his wounded buddy up and out. Somehow II dragged and carried the limp, heavy weight back, with bullets snapping.

and snarling all around me
Back a little way, helping hands
of other medics took him off my
back. How I managed it, I'll never
know. He was a big man, much
heavier than my scrawny 145

pounds

But I'll never forget the queer, exhibitated feeling I had, when I finally stopped panting, to rest. A stretcher team was taking the wounded man back to the Aid Station. I felt exhausted, messy with mud and blood, but somehow wonderfully peaceful inside

The final louch to that first combat job was almost poetic. It was such beautiful rrony that I burst out into a gasping cackle of silent laughter. The wounded GI was Clark! The same man who had humiliated me as a softy only the day before! I lay there for a long while, gsp. II was mild battle shock, probably. That first three under fire is some-

thing a man never forgets, and never really wants to remember. They told me later that Clark would be airight. He was evacuated to a rear area hospital the next day. It had been a close call, they said. My help had saved his

life.
Later, as such combat aid jobs became frequent and routine, the nervous tenseness of the first one grew steadily less. It never quite disappeared. Saving someone's life never gets to be a dull job. Only experience tends to dull the shock of seeing men bleeding and torn, screaming in agony or writhing like stricken animals.

cry like a woman, when some fine young fellow died trying to whisper a last, faint message to his mother, wife, or sweetheart Many a last letter I wrote for a man. Many a last letter I wrote for a man. Many a heart-breaking little story I heard from men near death, clutching at my sleeve to finish some last duty or promise. That sort of thing clings to me even today.

IT WAS DECKMER 1944, in the freezing snow, i.e., and fog of the Acennes, that the Germans last created the first state of the first state of the first state of the first state. For a while things had been rather quiet. Mostly cases of trench foot, frostbite, and pneumain, with a few wound cases. Then, in one blazing outburst, all of the first state of t

kraut divisions suddenly changed to two crack paner armies, fanatical Hiller Jugend, and war-wase innativy veternas. The 90th was pushfantivy veternas. The 90th was pushdenly whole corps and armies of erack kraut troops attacked in full concentrated power the Germans threw into this last-gasp offensive. To us, it was a wild uproar of arthlery barrages, tank attacks, and That was a time when we medic

worked day and night. Sleep and rest were something only remembered from long ago. We heard of the complete smashup of the 106th Infantry Division just to the south of us. We heard of the breathrough of us. We heard of the breathrough our long the south of the south unreal. We had enough to do just to stay alive on our own front. On our division's too-long (27 mile long) front, whole corps of

mile long) front, whole corps of krauts came smashing at us. We backed away slowly. Then held, pilling the snowy hills with enemy dead and plenty of our own. They came at us almost 20 to one.

I was proud to wear the Checkerboard patch that dark December. It was the men of the 99th who held the north shoulder of the German breakthrough. Held it steady, with their bodies and their blood, until the Battered Bastards of the 101st Airborne, the 7th Armored, and the

rest, had stopped the gap.
Curiously typical of the dogface soldiers' psychology was their reaction to one thing, mainly.
The Stars and Stripes, in its

The Stars and Stripes, in its articles about The Bulge never mentioned the 99th though it held the key spot in that great battle. Our doggies wanted to know, "How come, dammit? Why? Why don't

they even mention us?"
Later, we learned why. All this time the 99th had been kept on the "Secret List" of Allied Headquarters. The krauts knew we were there. But some beadquarters com-

reaming in agony or writhing like ricken animals. Sometimes I wished that I could ylke a wonan, when some fine last, faint message to his mother, ife, or sweetheart. Many a last dead yan, I sat, tast's where I

dead Yank. In fact, that's where I got my Purple Heart.

I was with the list Battalon of the 394th Infantry, when it won its Presidential Unit Citation near Eisenborn. I caught a mortar splinter in my side while carrying a litter with a wearded CI on it Luckily.

the wound was only slight. The 5 points for the medal, though, saved me from possible redeployment to the Pacific, later.

After The Bulge, we moved steadily ahead, in a series of attacks. Through the Siegfried Line. The drive to the Rhine. The Remanders of the street of the street

tacks. Through the Stegfried Line. The drive to the Rhine. The drive to the Rhine. The Remagen Bridgehead. We set up that bridgehead, though our men were not the first over the Ludendorf Bridge. Then the breakout, and the drive to Giessen. The surrounding final drive down into Bavaria, to the Danube and to the Isar. My red cross-marked helmet

(what a target those big white balls with red crosses were) bobbed along with the battered "tin hats" of the front-line troops, all the way. It was near the Inn River, at Muhidorf, that our last fight took place. There I finished my last com-

bat job. It was to save the life of a wounded Hungarian, that time. I didn't like the job, but I just couldn't let the bastard die. That's how it is in the medics. What you think of the man you belp

What you think of the man you help doesn't matter. Your job is to help him—to save his life. If you lose yours in the process—that's part of the job.

Ask any combat veteran about us medics! He'll tell you. No GI sneers at the medics after his first day in combat. I don't have to apologize for the red cross armband and helmet markings.

Sometimes I wonder what ever happened to Clark, the fellow whose razzing got under my skin so! Never saw him again, nor heard from him. He was sent home.

I'd like to meet him again. Just to ask him: "Do you still think it's a soft job being a medic?"

I know what he'd say, though:
"We line soldiers have to stick
together. Riffemen or Combat Medic
—it's all the same on the firing line."
I'm proud of being a dogface
soldier, medic or gunner, and a vet-

eran of the Checkerboard Division a first class fighting division.

I WAS A MEDIC. And I'm proud

of it!

## If You Can Qualify, This Probably Is The Easiest Way To Make Money In All America!

#### LET'S BE FRANK RIGHT FROM THE START

I don't claim that this way of making money is the best way there is. I don't say it will make you rich overnight . . . it may not even make you rich at all. But . . . if you are now working, or are retired, and have some extra time you'd like to trade for a very handsome amount of extro cash. I believe I can show you one of the easiest ways ever found to make that extra money . . . provided you can qualify.

who has helped thausends make extra cash!

First, because I believe you are entitled to more than mere the firm that makes this opportunity possible. My name is Ned Mason, and my company is the Mason Shoe Mfg. Co., with factories in Chippewa Falls, Wisconsin isometimes called "Shoe City". The company has been making fine shoes since 1904, so you can see this is no fly-night business, but one that has grown steadily for more than half a century

Back in 1904, when my father, B. A. Mason, founded the present company, he had in mind more than the making of fine shoes alone. He realized that the ordinary shoe store with its small stock of shoes could never hope to offer customers all the styles, in all the various combinations of sizes and widths they needed. People were misfitted more often than not—or they had to settle for a less desirable style. So, B. A. Mason built the Mason Shoe Mfg. Co. on the idea of a complete shoe fitting service. It has been my privithe to complete any pitting service. It has been my privi-lege to carry on this idea, and its auccess may be measured by the fact that, today, our warehouse stocks more than 250,000 pairs of shoes . . . a selection many times greater than the average shoe store's.

But there was even more to my Father's idea than that He believed in personalized service. . . in letting the customer select his or her shoes in leisure, without pressure, right in his or her home. And this custom has continued through more than fifty years of growth. In fact, today the idea is far more popular than ever.

Down through the years, our Company developed many new discoveries. Some of these you may have reed about in your newspaper, seen advertised in National magazines. But, always, these new discoveries were made available only through local Mason Shoe Counselors. because Mason Shoes are never sold by stores

Everyone buys shoes. Most men buy 3 pairs a year; most women 4 pairs. And, because Mason Shoes are not sold in stores, folia must buy from their local Massen Shoe Counselor to get the many special features only Massen Shoes can give thorn. These features include the famous Velvet-sea Air "Sylfies" than she had been supported by the state of the sta stores, folks must buy from their local Mason Shoe Counselor shoe and incket styles

And, like my father before me, it has been my privilege to help others make extra money by giving qualified men— FREE—everything they need to start making easy extra cash immediately in spare time, just for showing friends, neighbors, folks where you work the many fine features of neighbors, tolks where you work.

Mason shoes and jackets—and taking easy orders! But first let me give you some examples of the kind of earnings you can expect if you qualify for this money-

making opportunity. J. Kelly, of New York, writes "On June 5th, I sold 38 pairs of shoes from 6:30 P.M. to 10:30 P.M., earning myself \$93.55 in commissions." (While this is exceptional, it shows what an ambitious man can do. C. Martin, of Michigan, said in a recent letter "I know there must be many men like myself who would like to add

to their pensions to gain the extra things of life. One fore-noon I made a net profit of \$21.75!"

noon I made a net profit of \$21.75)"
"I've used my profits to pay off the final notes on a farm I own and financed a two-week vacation in North Carolina for my family," writes T. Woeley of lowa.

And a California man, C. Tuttle, lad this to say about selling Mason Shoes: "I have made more money since I started this business than in all my past life. My average spare time earnings have been over \$50 a week." I could go on and show you hundreds upon hundreds of such grateful letters from fellows like yourself whom it has been my good fortune to help atart themselves in this profit-able business. These letters are on file at our factory for all

who care to read them. But the important thing is this: I want to send you every-thing you need to start in this exciting business... the very same Outfit that helped these and thousands of other men start making such earnings possible... and I want to send it to you FREE—right now.

But because this outfit costs us a lot of money, I want to

be aure first that you are really ambitious . . really inter-ested in a chance to make important money. So here's my offer, and I think you'll agree it's a good one for you: Simply fill out and mail the coupon at the bottom of this page. With it, enclose a brief letter telling me why you are page. With it, encouse in our letter tening line why you are qualified for this opportunity to make easy extra cash. (You'd want to know aomething about ME if you were mak-ing me this offer, so it is only natural that I want to know something about YOU.) Rush letter and coupon—I'll do

MR. NED MASON 21 E. Grand Chippewa Falls, Wisconsin	Bept. 450

data instructions for w

And all trapped behind that sandbar. Barclay, who was commander of

the British forces on the Lake, knew the Yankee brigs could not cross that bar with their guns in, and could only do it without the weight of the artillery during smooth water. So he blockaded the mouth of the harbor, waiting,

On the 2nd of August, 1813, for some unaccountable reason. Barclay's ships disappeared, and Perry wasted no time in speeding his fleet away. On the 4th the Lawrence was towed to the bar, her guns landed on the beach, and through an involved process of sinking scows

alongside, was hoisted two feet clear -which wasn't enough. The whole job had to be done anew. This time they succeeded, and the Lawrence was over the bar. The guns were immediately re-installed Just as the ship passed the bar at 8 A.M. on the 5th, the enemy re-

anneared But their ruse had fallen through, and they had not counted on the action of Perry A few shots were exchanged, and the enemy drew off, for the land-

masses conflicted with good positioning Then the Nigogra crossed without difficulty

manned, Perry set out after the fleeing English ships. He had estimated that seven hundred and forty men and officers were needed to man his ships adequately, but he did not

hesitate to put out to see with a total force of merely four hundred and ninety Of these, a hundred were soldiers sent him only nine days before he sailed, and most of them on deck for the first time in their lives Chauncey was so busy on Lake Ontario busy with his own affairs

that he was not likely to give Perry any more men, better soldiers or sailors, than could be spared. Perry in fact sent a note of protest which said: "The men that came . . . are a motley set, blacks,

soldiers and hove I cannot think you saw them after they were selected " To which Chauncey replied warningly, "As you have assured the Secretary that you should conceive yourself equal or superior to the

enemy, with a force of men so much less than I had deemed necessary. there will be a great deal expected from you by your country, and I trust they will not be disappointed in the high expectations formed of your gallantry and judgment." Perry's temper flared at this ob-

vious slap in the face. He had wanted to chase the enemy, and had applied to his superior for more men. He had been refused, and impulsively asked to be relieved of his command, expressing his grievances in a letter to the Secretary of the Navy

"I cannot serve under an officer who has been so totally regardless of my feelings. . . The critical state of General Harrison was such that

I took upon myself the responsibility of going out with the few young officers you had been pleased to send me, with the few seamen I had and as many volunteers as I could muster from the militia. I did not shrink from this responsibility but. Sir. at that very moment I surely did not anticipate the receipt of a letter in every line of which is an

insult " Fortunately, Perry's transfer could not be granted then, and he received a mild rebuke from the Secretary. Even in the face of such abandon and complacency on the part of his superiors, Perry floated his ships out of the harbor, and engaged the enemy briefly as de-

But Barclay, the English commander retreated taking his fleet to Amherstberg, waiting for a powerful new ship named the Detroit. He had to snar for time till that new magnificent fighting machine was with him

While Barclay stalled, the Amer-Even though frighteningly underican vessels anchored off Erie and put aboard stores. With such a light complement of men to man and fight his ships, Perry was overjoyed to hear that finally he was to get more

hands. Commander Jesse D Elliott was hastening to join him When he arrived, Elliott became second in command to Perry, and

assumed charge of the Niagara. Perry now felt that he was ready. For almost a month, then, the American flag flew undisturbed as the Yankees maintained control of the Lake region.

But Barclay was having his troubles also. Food was more than scarce in the Amherstberg region, and finally, desperate, at sunrise of the 10th of September, 1813, a sailor at the masthead of the Lawrence sighted the British squadron steering across the Lake with a fair wind and ready to give battle.

Perry instantly sent his crews to quarters and trimmed sail to quit the bay and form his line in open water.

Chauncey had warned him not to get in close to the enemy, to stand off and exchange shot with them, but under no circumstances to lose any ships. The cautious timorous nature and naval policies of the Commodore were evident.

But the fiery Perry believed the opposite. In the final council held in his cabin. Perry told his captains to get in close alongside. Perry's decision to give and take punishment, no matter if it lost him a ship or two, was sound, as it turned out, and had be followed Chauncey's weak-water instructions, the battle would have

been easily lost. For the accounts of armament, crews, fonnage vary with the many reports of the battle. Most reports excupulously hide the fact that the sax public way the sax public period of the sax has been as the sax public period with the sax has been accounted to the sax public period with the sax public perio

up for the extra number of British

cannonade.

Nonetheless, the battle was a bloody one, for grape, round, can bloody one, for grape, round, can with the singular borror each one can inflict. It was to be a close can the control of the

Shortly thereafter, the action began all along the line, with Perry's ship the Laurence undergoing terribb bombardment: The Laurence bore down on the enemy steadily, eved, waiching steadily for any shifting of the wind, and sudden movement of the English squadron. It took her twenty minutes to get the English Chippenoy and Petrois.

heaving 123 pounds each, smashed her mercilessly. The rigging shattered and ripped, falling with brutal suddenness on the heads of the gunners. The ship began to list badly as shot after shot

was sent into her hull.

A ripping, whistling cannonfull of chain shot sailed across the space between the two ships, and wound itself in the masting, snapping and sending bits of metal, links, wood spliniters caroning off the deck and to be dragged to the side, with their skulls split by metal, their arms nearly ripped loose by screaming nearly ripped loose by screaming

shards of wood

But abruptly, danger in the form
of failure by Blliott on the Niagara
to handle his opponent, the Queen
Charlotte, threatened the badly suf-

fering Laurence. Elliots seemed to be remembering Chauncey's mild words to stay out of range, and would not bring the of range, and would not bring the stood off—alimat as a spectator to the horrible shelling the Laurence was receiving—the Queen Charlotte took up a position near the Detroit, where her guns could deliver broadstay to the property of the property of

in his own defense Elliott later stated that lack of wind had prevented him from drawing ahead to

engage and divert the Queen Charlotte and that he had been instructed to hold a certain position in the

line of battle.

But the facts cannot be denied:
he dropped astern and for two hours
remained nothing more than an observer in a desperate action in
which his ship was sorely needed.
Had he moved in as he was needed,
the Laurence would not have had
in strike her rolors and surrender to

the enemy.

However, had he moved in, the
Battle would never have had its most
dramatic moment when Perry was
compelled to shift his pennant from
the listing, burning hulk of the
Laurence and from the quarterdeck of the Ningara, rally his ships,
snalrhus trumph from the very

jaws of death and disaster

Even as the rigging and masts
crashed behind him, the flames
reaching up to eat away the shotriddled sailcloth, the intense Perry
swore he would not strike the day to
the enemy. He hauled pennant,
even as the last gun that could fire
exploded from an overload of cannonade, kullms its gunners and

sighters.

More than half the ship's company had been killed or wounded eighty-three men out of one hundred and forty-two.

impossible to either steer or handle the Laurence—the shap drifting helpless as a scow—Perry cried for a bost to be put out. As the Nigara, ready and fit to fight, the remaining men on the Laurence hauled down their flag in token of surrender... for there was nothing else to do.

The air was thick with cannon smoke, and the water was littered with the wreckage of the American ship. The wounded and dead lay where they had fallen, those conscious praying for a miracle to deliver them from this debaele. As soon as he jumped on deek, Perry took command of the Niggrar, sending the cowardity Rilliott of

to bring up the rearmost schooners.

Now there was no hesitation. Now there was no lagging.

With topgallant sails sheeted home, the Niagara bore down on the Detroit, driven by a freshening

breeze. How fearful that ship looked, sailing into the very teeth of the English guns, and Barclay, suddenly terrified at this Yankee madman who had left his ship in order to fight again, tried to avoid being raked by American broadsides from

the Ningara.

In trying to turn away, the English flagship collided and fouled her consort, the Queen Charlotte.

And there they stayed locked, while the American fire pounded them bit by bit into the fresh water

of the Lake.

Eventually they wrung free, but it was too late. The odds were now hopeless.

The officer who finally had to signal the surrender of the Detroit said this of the ship: "The ship lying completely unmanageable, every recommendation of the ship lying and and gaff down, all the other mast badly wounded, not a stay left forward, bull shattered very much, a number of goan disabled, and the number of goan disabled, and the number of goan disabled, and the manageable of the ship of the ship shead and astern, none of our own in a position to support us, I was under the paintful necessity of an struck, it of years Charlotte having

previously done so."

Barclay had been twice wounded, and had had to be carried below. The first lieutenant was mortally wounded. And in the moments of crisis, the ship was left in charge of a second lieutenant.

Shortly thereafter, the back of the English squadron having been broken, the death toll fantastically high for such a naval encounter, Perry sent his famous message. "We have met the enemy, and

they are ours."

He sent it after one of the hardest-fought navail bettles of the age.
He had fought a battle with feadershall all the property of the sent of

unquestioned naval genius In spite of the inefficiency of his superiors, the obvious cowardice of his companion officer, and the staggering power of the English guns turned solely upon him and his ship. Perry came out of the bloody duel at Lake Eric one of the greatest heroes the Yankee America had ever seen.

And what of his superior, the mild Commodore Chauncey who said, "stand off and don't engage them close"?

On Lake Ontario, Chauncey dragged his campaign through two seasons and then left the enemy in control.

Through Perry's forthright and audacious action, the entire Northwest was won back for the Americans, and the sound of grape-shot whistling through the air will be heard across Lake Erie for many

years.

The bloody toe-to-toe duel on
Lake Erie was fought by a kind of
man who is now gone to us The
bloody-handed fighter who touched
the black powder with spark, and
watched the cannister shot sail
through the hull of an enemy fri-

We may lob shells at the enemy these days, from a distance of twenty miles, but Oliver Hazard Perry stands on the deck, staring into the battle smoke, and wondering how the button-pushers of today might have fared in the days of the sailing shin.

### This Practical Self-Study Course will give you

Now you, too, can learn mathematics job ... the kind of training that is quickly recognized today and gladly

paid for Just look at the "help wanted" ads in any hig-time newspaper-look at the hundreds of wonderful opportunities for men who know mathematics: superintendents and foremen, technicians and laboratory workers, designers, draftsmen, mathematicians and engineers. Look at the huge companies-page after page of themthat are advertising for belp every day in the year! They all need trained men, men keep up with the ever-increasing demands in aviation, electronics, nuclear science, automation, jets and missiles.

Now you can learn mathematics-the foundation of all technical work-quickly, easily, inexpensively and right in your own bome. A very simple and interesting course in book form has been prepared for you by an expert who has devoted a lifetime to teaching practical men the fundamentals of this important subject. Every minute you spend on this com-plete, practical course in mathematics will pay you big dividends.

### MATHEMATICS For Self Study

A COMPLETE COURSE AND REFERENCE LIBRARY

You start right from the beginning with a review of arithmetic that gives the special short cuts and trick problems that save countless hours of time. Then, step by step, you go into higher mathematics and learn how simple it all can be when an expert explains it to you

Get This Training in Only Ten Minutes a Day You can gain all the benefits of a mathematical training in just a few months if you will devote only ten minutes each day to these easy, practical lessons. Here are but a few of the hundreds of asbiocts simulified and

## They DREW their way from "Rags to Riches"

### Now they're helping others do the same

#### B., DEV TAVLOR

A LBERT DORNE was a kid of the slums who loved to draw. Before he was 13, he had to guit school to support his family Although he worked 12 hours a day-he managed to study art at home in "spare Soon people were willing to pay good money for his drawings. At 22 he was calning \$100 a week as a commercial artst. He rose higher and higher to become probably the most fabulous money-maker in the history of advertising art.

Dorne's "rags to riches" story is not umous. Norman Rockwell left school at 15 Stevan Dohanos, famous rover artist. drove a truck before turning to art Harold Von Schmidt was an outban at 5 Robert Faweett the "illustrators illustrator," left cohool of 14 Austria Bridge Who office school at 14. Austin Briggs, who take in a magnificent home over 100 feet long

A elec to belo others: Nearly ten years agn, these men suthered in Dorne's luxuntous New York studio for a fateful meetine With them were aix other equally famous artists-Al Parker, Jon Whitcomb Fred Ludekens, Ben Stahl, Peter Helck, John Atherton Almost all had similar

Dorne outlined to them a problem and a plan He pointed out that artists were needed all over the country. And thousands of men and women wanted very much to become artists. What these people worded most was a convenient and effective way to master the trade secrets and professional know-how that

the famous artists only by long, successful expensence," Why can't

we," asked Dorne, "develop some way to bring this kind of topdrawer art training to anyone with talent ... no matter where they live his best-loved erices artist late soil at 15 achedules may be?

The idea met with great enthusiasm, In fact, the twelve famous artists quickly burkled down to work—taking time off from their busy careers Looking for a way to explain drawing techniques to students, who would be thousands of miles away, they turned to the war-born methods of modern visual training. What better way could you teach the art of making pictures, they reasoned, than through pictures? They made over 5,000 drawings specoulty for the school's magnificent home study lessons. And after they had covered the fundamentals of art each man con-tributed to the course his own special "hallmark" of greatness Por example, explain characterisation and the secrets of color Jon Whitcomb showed how to world-famous. Dorne showed step-by-step ways to achieve animation and humor.

Pone By, the men anent three years working out a revolutionary, new way to corthe student sent in, he would receive a long personal letter of criticism and advice Alone with the letter, on a transparent Constitute the contractor would actually

drose in detail his correc-Thus there rould be no misunderstanding. And the student would have a permanent record to refer to as often as he tiked.
